In this month’s *Bulletin*

In an editorial, Harry A Lando et al. (2) suggest strategies for reducing the harm that tobacco causes to children. In a second editorial, Venkatraman Chandra-Mouli et al. (3) call for collaboration between sexual and reproductive health and HIV programmes to better respond to the needs of adolescents. Liz Allen (4) discusses the difficulty of measuring the impact of health research, in a third editorial. In an interview, Robert Killick-Kendrick (11–12) discusses ongoing efforts to control the ancient parasitic disease, visceral leishmaniasis.

---

**Spain**

**Hydatid disease costs millions**

- Christine Benner et al. (49–57) estimate the economic losses caused by human and animal hydatid disease.

---

**China**

**Health reform targets vulnerable**

- Cui Weiyuan (5–6) reports on how China is extending coverage to migrant workers as part of its new health reform.

---

**Viet Nam**

**Mortality statistics are vital**

- Chalapati Rao et al. (58–65) suggest ways to improve the civil registration system to obtain more accurate mortality statistics.

---

**Multiple types of abuse and mental health**

- Huong Thanh Nguyen et al. (22–30) examine the impact of maltreatment during childhood on adolescent mental health.

---

**Spain**

**Hydatid disease costs millions**

- Christine Benner et al. (49–57) estimate the economic losses caused by human and animal hydatid disease.

---

**South Africa**

**Breast is always best**

- Lungi Langa (9–10) reports on how new research has changed breastfeeding guidelines for HIV-positive mothers.

---

**Senegal**

**Water woes in holy city**

- Felicity Thompson (7–8) reports on the annual pilgrimage that overwhelms Touba’s fragile water and sanitation system.

---

**Zimbabwe**

**Tuberculosis screenings**

- Elizabeth L. Corbett et al. (13–21) evaluate different approaches to screening for tuberculosis, especially in HIV-positive individuals.

---

**Malnutrition and mortality**

Linda Vesel et al. (39–48) assess the relationship between infant malnutrition, breastfeeding and neonatal mortality.

---

**Mixed health systems syndrome**

Sania Nishtar (74–75) discusses the typical problems of health systems with a public–private service mix.

---

**Cambodia**

**Mortality statistics are vital**

- Chalapati Rao et al. (58–65) suggest ways to improve the civil registration system to obtain more accurate mortality statistics.

---

**Viet Nam**

**Multiple types of abuse and mental health**

- Huong Thanh Nguyen et al. (22–30) examine the impact of maltreatment during childhood on adolescent mental health.
