This issue addresses the special theme of retaining health workers in remote and rural areas. Manuel M Dayrit et al. discuss this global challenge, particularly in countries with critical shortages of health workers. Lincoln C Chen describes the uneven distribution of health workers and the challenges that countries face.

**Norway**

**Dealing with doctor shortages**
Karin Straume & Daniel MP Shaw (390–394) look at ways to keep doctors practising in Norway’s far north.

**Cuba**

**Calling all doctors**
Gail Reed (325–326) reports on the medical school that is training doctors for the developing world.

**Senegal**

**Solving regional differences**
Pascal Zurn et al. (386–389) show how a flexible contracting system can make it easier to recruit in remote areas.

**Chile**

**Combined incentives work**
Sebastian Peña et al. (371–378) explore a programme that successfully matches physicians’ interests in specialization with the need for rural doctors.

**Nigeria**

**Pilot insurance plan**
Gary Humphreys (329–330) reports on how a Dutch-supported foundation is ‘exporting’ private health insurance to Nigeria.

**Kenya, South Africa & Thailand**

**Attracting nurses to rural areas**
D Blaauw et al. (350–356) find different benefits attract nurses in each country studied.

**Ethiopia and Rwanda**

**Who wants a rural health post?**
Pieter Serneels et al. (342–349) study why health workers decide to work in a rural area.

**Ghana**

**Incentives for medical students**
Margaret E Kruk et al. (333–341) research influences on medical students’ job choices.

**Ghana**

**Incentives for medical students**
Margaret E Kruk et al. (333–341) research influences on medical students’ job choices.

**Norway**

**Dealing with doctor shortages**
Karin Straume & Daniel MP Shaw (390–394) look at ways to keep doctors practising in Norway’s far north.

**Cuba**

**Calling all doctors**
Gail Reed (325–326) reports on the medical school that is training doctors for the developing world.
