Cardiovascular disease now ranks as the world’s top cause of death, causing one third of all deaths globally. Heart disease can no longer be seen as the problem of overworked, overweight middle-aged men in developed countries. In today’s world, women and children too are at risk. Already, 75% of all CVD deaths occur in the poorer regions of the world, and this is likely to increase in the future.

Following on from the success of WHO’s Tobacco Atlas, the Atlas of Heart Disease and Stroke addresses this most urgent health issue in a ground-breaking, clear and accessible format, designed to inform UN agencies, government officials, politicians, and other decision makers, the media, researchers, and the general public, as well as provide an essential tool for the health professional.

The Atlas of Heart Disease and Stroke charts in full-colour maps and graphics the wide range of issues relating to this global epidemic.

**Topics include:**
* Risk factors: high blood pressure, tobacco use, inactivity, obesity, lipids, diabetes
* Women, childhood and youth
* The global burden of CVD, including the economic burden
* Research
* Prevention
* Policies and legislation
* Treatment
* Predictions

“We applaud the authors for producing such a comprehensive document in such a user-friendly format”
— World Heart Federation

“Heart disease and stroke rob too many people of precious years of quality life. This one-of-a-kind atlas serves as a key resource for those on the frontlines of health”
— Dr Julie Gerberding, Director, CDC
## Table of Contents

### Foreword

### Preface

### Part one: Cardiovascular disease

Types of cardiovascular disease

Rheumatic fever and rheumatic heart disease

### Part two: Risk factors

Risk factors

Risk factors start in childhood and youth

Risk factor: blood pressure

Risk factor: lipids

Risk factor: tobacco

Risk factor: physical inactivity

Risk factor: obesity

Risk factor: diabetes

Risk factor: socioeconomic status

Risk factor: women: a special case?

### Part three: The burden

Global burden of coronary heart disease

Deaths from coronary heart disease

Global burden of stroke

Deaths from stroke

Economic costs

### Part four: Action

Research

Organizations

Prevention: personal choices and actions

Prevention: population and systems approaches

Health education

Policies and legislation

Treatment

### Part five: The future and the past

The future

Milestones in knowledge of heart and vascular disorders

BCE-1852

1856-1967

1969-2004

### Part six: World tables

World data tables

Glossary

Sources

Useful contacts

Index
