## The Atlas of Heart Disease and Stroke

Cardiovascular disease now ranks as the world's top cause of death, causing one third of all deaths globally. Heart disease can no longer be seen as the problem of overworked, overweight middle-aged men in developed countries. In today's world, women and children too are at risk. Already, 75% of all CVD deaths occur in the poorer regions of the world, and this is likely to increase in the future.

Following on from the success of WHO's *Tobacco Atlas*, the *Atlas of Heart Disease and Stroke* addresses this most urgent health issue in a ground-breaking, clear and accessible format, designed to inform UN agencies, government officials, politicians, and other decision makers, the media, researchers, and the general public, as well as provide an essential tool for the health professional.

The *Atlas of Heart Disease and Stroke* charts in full-colour maps and graphics the wide range of issues relating to this global epidemic.

### Topics include:

- \* Risk factors: high blood pressure, tobacco use, inactivity, obesity, lipids, diabetes
- \* Women, childhood and youth
- \* The global burden of CVD, including the economic burden
- \* Research
- \* Prevention
- \* Policies and legislation
- \* Treatment
- \* Predictions

***"Heart disease and stroke rob too many people of precious years of quality life. This one-of-a-kind atlas serves as a key resource for those on the frontlines of health"***

— Dr Julie Gerberding, Director, CDC

***"We applaud the authors for producing such a comprehensive document in such a user-friendly format"***

— World Heart Federation

## Table of contents

### Foreword

### Preface

### Part one: Cardiovascular disease

Types of cardiovascular disease  
Rheumatic fever and rheumatic heart disease

### Part two: Risk factors

Risk factors  
Risk factors start in childhood and youth  
Risk factor: blood pressure  
Risk factor: lipids  
Risk factor: tobacco  
Risk factor: physical inactivity  
Risk factor: obesity  
Risk factor: diabetes  
Risk factor: socioeconomic status  
Risk factor: women: a special case?

### Part three: The burden

Global burden of coronary heart disease  
Deaths from coronary heart disease  
Global burden of stroke  
Deaths from stroke  
Economic costs

### Part four: Action

Research  
Organizations  
Prevention: personal choices and actions  
Prevention: population and systems approaches  
Health education  
Policies and legislation  
Treatment

### Part five: The future and the past

The future  
Milestones in knowledge of heart and vascular disorders  
BCE-1852  
1856-1967  
1969-2004

### Part six: World tables

World data tables  
Glossary  
Sources  
Useful contacts  
Index
