

THE IMPACT OF CHRONIC DISEASE IN HIGH INCOME COUNTRIES

Chronic diseases are the major cause of death and disability worldwide

Facts:

- In high income countries, chronic diseases are projected to account for 87% of all deaths (see below).
 - Total projected deaths in high income countries, 2005 = 8,140,000.
 - Total projected deaths due to chronic disease in high income countries, 2005 = 7,127,000.

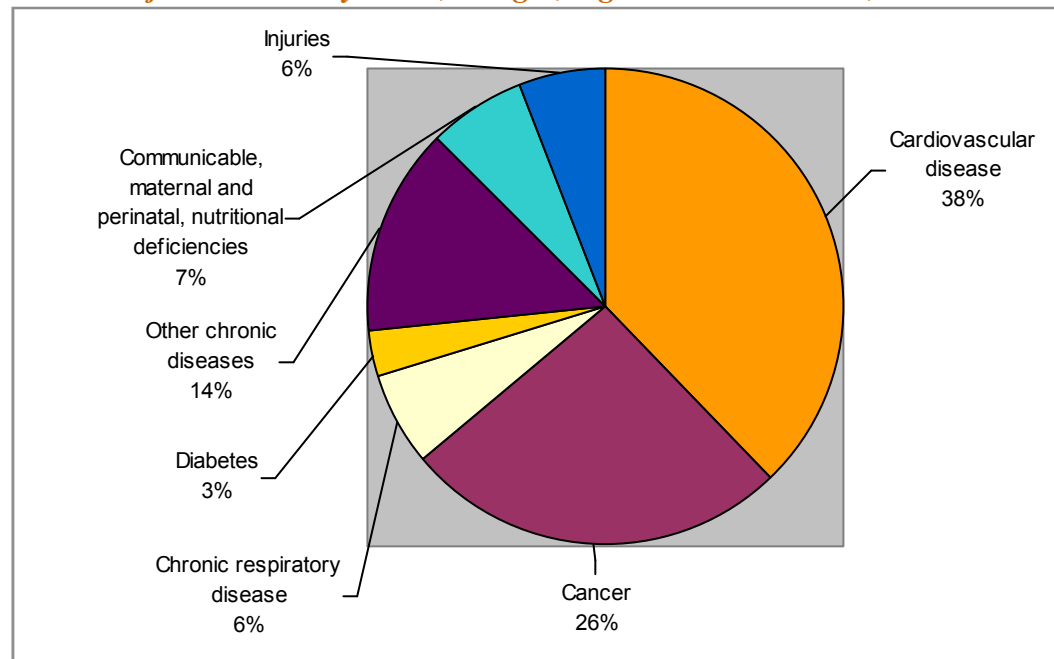

WHO projects that over the next 10 years in high income countries:

- 76 million people will die from a chronic disease.
- Deaths from infectious diseases, maternal and perinatal conditions, and nutritional deficiencies combined will increase by 0.1%.
- Deaths from chronic diseases will increase by 11% - most markedly, deaths from diabetes will increase by 53%.

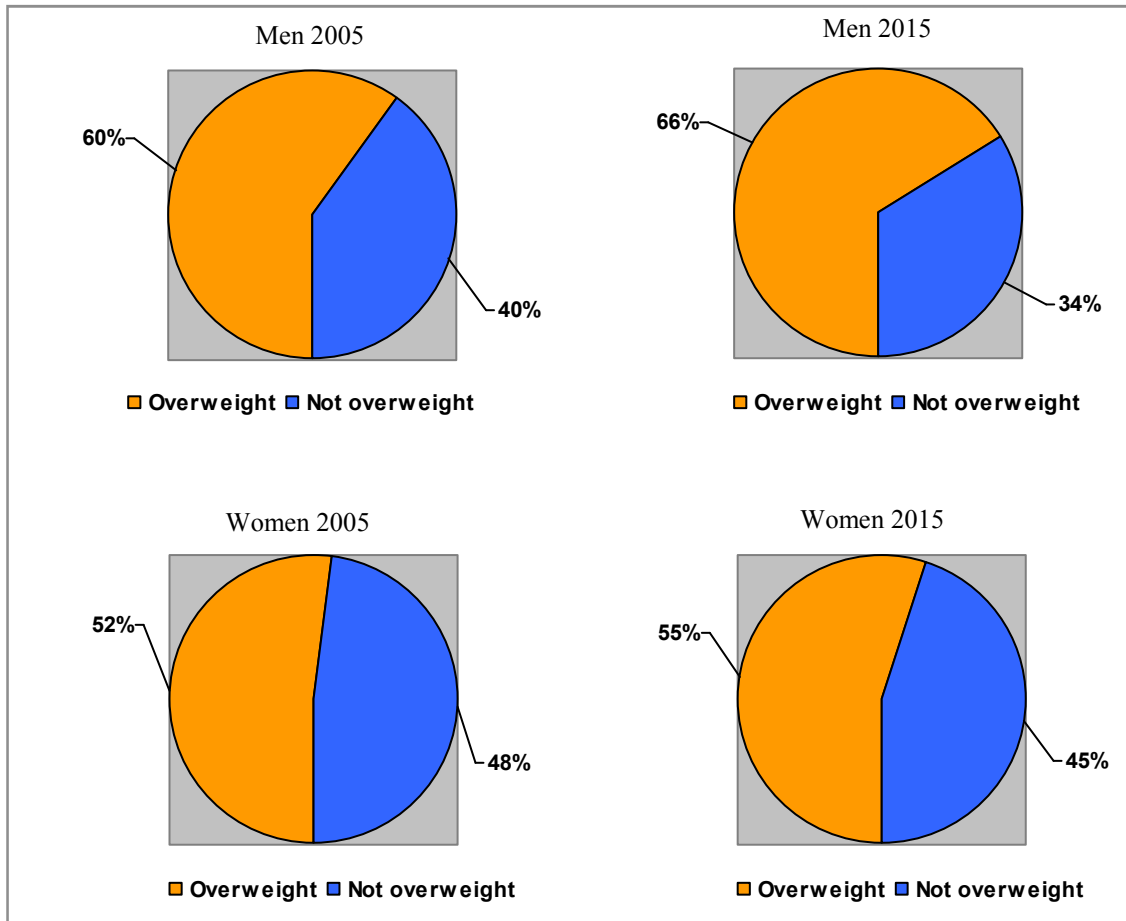

Note:

The data presented in this information sheet were estimated by WHO using standard methods to maximize cross-country comparability. They are not necessarily the official statistics of WHO Member States.

Projected deaths by cause, all ages, high income countries, 2005

Projected prevalence of overweight, high income countries, males and females aged 30 years or more, 2005 and 2015

Facts:

- Raised body mass index (overweight and obesity) is an important cause of chronic disease.
- Prevalence of overweight in high income countries is expected to increase in both men and women over the next 10 years (see charts, left).

Solutions:

- At least 80% of premature heart disease, stroke and type 2 diabetes, and 40% of cancer could be prevented through healthy diet, regular physical activity and avoidance of tobacco products.
- Cost-effective interventions exist, and have worked in many countries: the most successful strategies have employed a range of population-wide approaches combined with interventions for individuals.
- WHO estimates that in high income countries, a 2% annual reduction in chronic disease death rates over and above existing trends during the next 10 years would save 7 million lives; 2 million of these lives saved would be in people under age 70.
