

THE IMPACT OF CHRONIC DISEASE IN THE DEMOCRATIC PEOPLE'S REPUBLIC OF KOREA

Chronic diseases are the major cause of death and disability worldwide

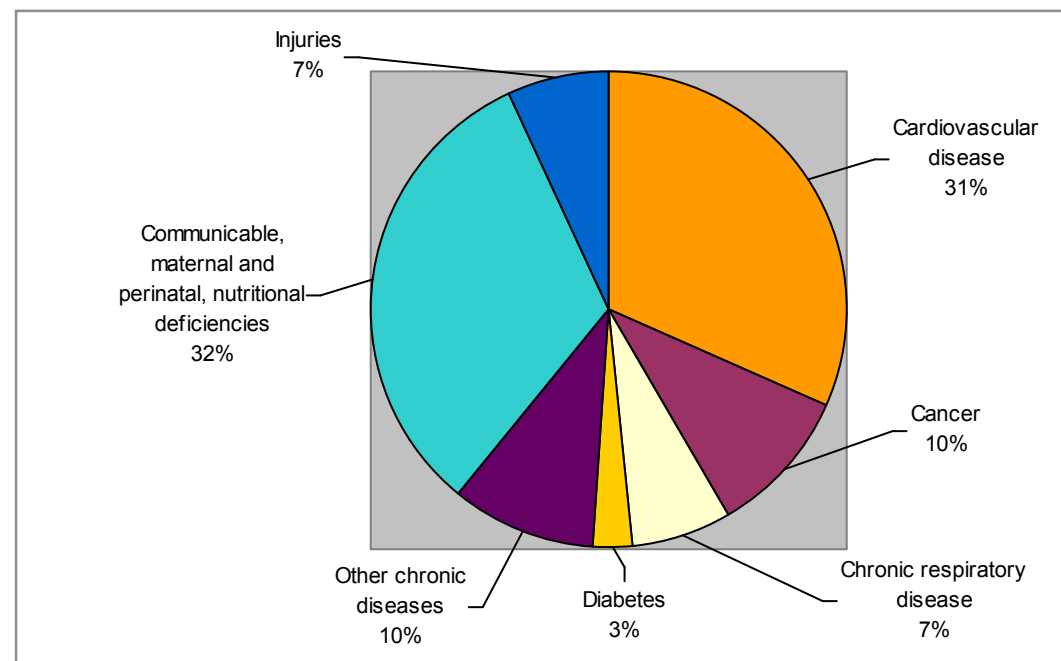

Facts:

- In the Democratic People's Republic of Korea, chronic diseases accounted for 61% of all deaths in 2002 (see chart, right).
 - Total deaths in the Democratic People's Republic of Korea, 2002 = 205,000.
 - Total deaths due to chronic disease in the Democratic People's Republic of Korea, 2002 = 125,000.

Note:

The data presented in this information sheet were estimated by WHO using standard methods to maximize cross-country comparability. They are not necessarily the official statistics of WHO Member States.

Deaths by cause, all ages, Democratic People's Republic of Korea, 2002

Projected prevalence of overweight, Democratic People's Republic of Korea, males and females aged 30 years or more, 2005 and 2015

Facts:

- Raised body mass index (overweight and obesity) is an important cause of chronic disease.
- Prevalence of overweight in the Democratic People's Republic of Korea is expected to increase in both men and women over the next 10 years (see charts, left).

Solutions:

- At least 80% of premature heart disease, stroke and type 2 diabetes, and 40% of cancer could be prevented through healthy diet, regular physical activity and avoidance of tobacco products.
- Cost-effective interventions exist, and have worked in many countries: the most successful strategies have employed a range of population-wide approaches combined with interventions for individuals.
