2006 Fact Sheet

The **2006 Morocco GSHS** measured alcohol and other drug use; unintentional injuries and violence; hygiene; dietary behaviors and overweight; physical activity; tobacco use; mental health; and protective factors.

The 2006 Morocco GSHS was a school-based survey of students in 1st, 2nd, and 3rd years. A two-stage cluster sample design was used to produce data representative of all students in 1st, 2nd, and 3rd years in Morocco. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 100%, the student response rate was 84%, and the overall response rate was 84%. A total of 2,670 students participated in the Morocco GSHS. Students self-reported their responses to each question on a computer scannable answer sheet. For comparison purposes, only students aged 13-15 years are included in the analyses for this fact sheet.
