# Table of Contents

**Introduction** 7

**Part 1. Ten statistical highlights in global public health** 9

1. Monitoring progress: appropriate use of health statistics 10
2. People living with HIV: better data, better estimates 11
3. Future health: projected deaths for selected causes to 2030 12
4. Child undernutrition: where are we now? 13
5. Levels and causes of death: filling data gaps 14
6. Tobacco use and poverty: high prevalence among the world’s poorest 15
7. Mental illness: depression worsens the health of people with chronic illness 16
8. Inequalities in health: understanding their determinants 17
9. Tuberculosis control: towards goals and targets 18
10. Health expenditure: meeting needs? 19

References 20

**Part 2. World health statistics** 21

**Health status: mortality** 22

- Life expectancy at birth (years)
- Healthy life expectancy (HALE) at birth (years)
- Probability of dying aged 15–60 years per 1 000 population (adult mortality rate)
- Probability of dying aged < 5 years per 1 000 live births (under-5 mortality rate)
- Infant mortality rate (per 1 000 live births)
- Neonatal mortality rate (per 1 000 live births)
- Maternal mortality ratio (per 100 000 live births)
- Deaths due to HIV/AIDS (per 100 000 population per year)
- Deaths due to tuberculosis among HIV-negative people (per 100 000 population per year)
- Deaths due to tuberculosis among HIV-positive people (per 100 000 population per year)
- Age-standardized mortality rate by cause (per 100 000 population)
- Distribution of years of life lost by broader causes (%)
- Distribution of causes of death among children aged < 5 years (%)

**Health status: morbidity** 32

- HIV prevalence among adults aged ≥ 15 years (per 100 000 population)
- Prevalence of tuberculosis (per 100 000 population)
- Incidence of tuberculosis (per 100 000 population per year)
- Number of confirmed cases of poliomyelitis
Table of Contents

Health service coverage 36
Immunization coverage among 1-year-olds with one dose of measles (%)
Immunization coverage among 1-year-olds with three doses of diphtheria, tetanus toxoid and pertussis (DTP3) (%)
Immunization coverage among 1-year-olds with three doses of Hepatitis B (HepB3) (%)
Antenatal care coverage (%)
Births attended by skilled health personnel (%)
Contraceptive prevalence rate (%)
Children aged < 5 years sleeping under insecticide-treated bednets (%)
Antiretroviral therapy coverage among people with advanced HIV infections (%)
HIV-infected pregnant women who received antiretrovirals for PMTCT (%)
Tuberculosis detection rate under DOTS (%)
Tuberculosis treatment success under DOTS (%)
Children aged < 5 years with ARI symptoms taken to facility (%)
Children aged < 5 years with diarrhoea receiving ORT (%)
Children aged < 5 years with fever who received treatment with any antimalarial (%)
Children 6–59 months who received vitamin A supplementation (%)
Births by Caesarean section (%)

Risk factors 46
Children aged < 5 years stunted for age (%)
Children aged < 5 years underweight for age (%)
Children aged < 5 years overweight for age (%)
Low-birthweight newborns (%)
Adults aged ≥ 15 years who are obese (%)
Access to improved drinking water sources (%)
Access to improved sanitation (%)
Population using solid fuels (%)
Prevalence of current tobacco use in adolescents (13–15 years) (%)
Prevalence of current tobacco use among adults (≥ 15 years) (%)
Per capita recorded alcohol consumption (litres of pure alcohol) among adults (≥ 15 years)
Prevalence of condom use by young people (15–24 years) at higher risk sex (%)

Health systems 56
Human resources for health
Physicians; Nurses; Midwives; Dentists; Pharmacists; Public and environmental health workers; Community health workers; Laboratory health workers; Other health workers; Health management and support workers
Table of Contents

Health expenditure ratios

- Total expenditure on health as % of gross domestic product
- General government expenditure on health as % of total expenditure on health
- Private expenditure on health as % of total expenditure on health
- General government expenditure on health as % of total government expenditure
- External resources for health as % of total expenditure on health
- Social security expenditure on health as % of general government expenditure on health
- Out-of-pocket expenditure as % of private expenditure on health
- Private prepaid plans as % of private expenditure on health

Health expenditure aggregates

- Per capita total expenditure on health at average exchange rate (US$)
- Per capita total expenditure on health at international dollar rate
- Per capita government expenditure on health at average exchange rate (US$)
- Per capita government expenditure on health at international dollar rate

Coverage of vital registration of deaths (%) 65
Hospital beds (per 10 000 population) 65

Inequities in health

Probability of dying aged < 5 years per 1 000 live births (under-5 mortality rate)
by place of residence; by wealth quintile; by educational level of mother
Children aged < 5 years stunted for age (%)
by place of residence; by wealth quintile; by educational level of mother
Births attended by skilled health personnel (%)
by place of residence; by wealth quintile; by educational level of mother
Measles immunization coverage among 1-year-olds
by place of residence; by wealth quintile; by educational level of mother

Demographic and socioeconomic statistics

Population (thousands)
Annual population growth rate (%)
Population in urban areas (%)
Total fertility rate (per woman)
Adolescent fertility rate (%)
Adult literacy rate (%)
Net primary school enrolment ratio (%)
Gross national income per capita (international$)
Population living below the poverty line (% living on < US$1 per day)
Introduction

*World health statistics 2007* presents the most recent health statistics for WHO’s 193 Member States. This third edition includes a section with 10 highlights of global health statistics for the past year as well as an expanded set of 50 health statistics.

*World health statistics 2007* has been collated from publications and databases produced by WHO’s technical programmes and regional offices. The core set of indicators was selected on the basis of their relevance to global health, the availability and quality of the data, and the accuracy and comparability of estimates. The statistics for the indicators are derived from an interactive process of data collection, compilation, quality assessment and estimation occurring among WHO’s technical programmes and its Member States. During this process, WHO strives to maximize the accessibility, accuracy, comparability and transparency of health statistics.1

In addition to national statistics, this publication presents statistics on the distribution of selected health outcomes and interventions within countries, disaggregated by gender, age, urban versus rural setting, wealth, and educational level. Such statistics are primarily derived from analyses of household surveys and are available only for a limited number of countries. We envisage that the number of countries reporting disaggregated data will increase during the next few years.

The core indicators do not aim to capture all relevant aspects of health but to provide a comprehensive summary of the current status of a population’s health and the health system at country level. These indicators include: mortality outcomes, morbidity outcomes, risk factors, coverage of selected health interventions, health systems, inequalities in health, and demographic and socioeconomic statistics.

All statistics have been cleared as WHO’s official figures in consultation with Member States unless otherwise stated. WHO’s estimates use data from publicly accessible databases, peer-reviewed methods of estimation, and consultation with experts around the world. The estimates published here should, however, still be regarded as best estimates made by WHO rather than the official view of Member States.

As the demand for timely, reliable and comparable information on key health statistics continues to increase, users need to be well informed about the definitions used and the quality and limitations of health statistics. More detailed information, including a compendium of statistics and an online version of this publication, is available from WHO’s Statistical Information System (http://www.who.int/statistics). The web site also includes information on how each statistic is derived.

The online version of *World health statistics 2007* will be updated regularly, and it includes the most recent estimates and time-series of relevant health statistics. The online version also provides, whenever possible, metadata describing the sources of data, estimation methods and quality of estimates. It is hoped that careful scrutiny and use of the statistics presented in this report will lead to progressively better measurement of relevant indicators of population health and health systems.

---

1. To meet these objectives, WHO has initiated the organization-wide Programme on Health Statistics. For more information, see http://www.who.int/healthinfo/statistics/programme/en/index.html.
