Foreword ................................................................. ix
Preface ................................................................. xi
Acknowledgements ................................................... xiii

### Chapter 1. Preparedness for mass deaths

**Introduction** ......................................................... 1
**Coordinating institutions** ......................................... 2
  - Duties ................................................................ 3
  - Preparation of the plan .......................................... 4
**Technical programs** .................................................. 5
  - Body identification ............................................... 5
  - Epidemiologic surveillance and disease control ............. 5
  - Training ................................................................ 6
  - Simulations .......................................................... 7
**Relations with the community** ........................................ 8
**Relations with the media** .............................................. 8
  - Questions commonly asked after a disaster .................... 9
  - Guidelines for the official spokesperson ....................... 9
  - Proactive approach to media relations for the official spokesperson .... 9
**Conclusions** ............................................................. 10
**Bibliography** .......................................................... 11

### Chapter 2. Medicolegal work in major disasters

**Introduction** .......................................................... 13
**Organization of necessary personnel** .............................. 14
  - Organization and preparation of the team ...................... 14
  - Formation of the group and the warning plan .................. 15
  - Risk and vulnerability studies ..................................... 15
  - Technical preparation of the team ................................ 16
  - Cooperation agreements .......................................... 16
  - Exercises and simulations ......................................... 17
  - Material needs ...................................................... 18
  - Transport ........................................................... 19
Communications .................................................. 20
Protective clothing and equipment ............................. 21
Instruments and equipment ...................................... 23
Body preservation measures ..................................... 24
Temporary work camps or sites ................................. 25
Water and food ..................................................... 26
Medical care ......................................................... 27

Participants .......................................................... 27
Disaster professionals ............................................. 27
Other participants in disaster response ....................... 31

Operations coordination ......................................... 32
Search for information ........................................... 33
The place, the event, and the hazards ......................... 33
Presumed victims .................................................... 34

Removal of dead bodies .......................................... 36
Procedures at the disaster site ................................... 37
Transfer of human remains ...................................... 41
Holding and examination site ................................... 41
Holding area ......................................................... 41
Viewing area ....................................................... 43
Examination area ................................................... 43

Methods for identifying human remains .................... 44
Identification using visual recognition ......................... 44
Identification using anthropological studies .................. 45
Other methods of identification ................................ 47

DNA identification .................................................. 47
Historic background .............................................. 47
DNA identification process ..................................... 49
Accepting cases, managing evidence, and maintaining
chain of custody in DNA typing ................................ 51

Final disposal of corpses ......................................... 58
Low temperatures .................................................. 59
Chemical processes ................................................ 59
Chapter 3. Health considerations in cases of mass fatalities

Introduction .................................................................................. 71
Myths .......................................................................................... 72
Epidemiological risk of dead bodies in areas
with endemic diseases ................................................................. 73
Scientific basis of the absence of epidemiological
risk in non-endemic areas ............................................................ 76
Animal corpses ........................................................................... 78
Conclusions .................................................................................. 81
Bibliography ................................................................................ 83

Chapter 4. Sociocultural aspects

Introduction .................................................................................. 85
The funeral rite ............................................................................. 86
Changes in funeral rites through history ..................................... 88
Influence of culture, religion, and history on funeral ................. 89
The symbolic value of the corpse and burial ............................. 95
Mourning and rituals in disaster situations ............................... 97
Unresolved grief .......................................................................... 98
Arguments for the rapid disposal of corpses .............................. 100
Disaster management experiences ............................................ 101
Conclusions ................................................................................ 104
Bibliography ................................................................................ 106

Chapter 5. Psychological aspects

Introduction .................................................................................. 109
Specific vulnerabilities ................................................................. 110
Grief ............................................................................................ 111
Chapter 6. Legal aspects

Introduction ................................................. 129

General regulations on managing corpses ................................................. 129
  Unidentified bodies ................................................. 130
  Missing persons .................................................. 131

Identification of numerous corpses .................................................. 134

Consequences of failure to identify corpses ....................................... 135
  Provisions of national law ............................................. 135
  Provisions of international law ......................................... 138

Conclusions .................................................. 146

Model law for management of dead bodies in disaster situations .......... 148

Bibliography .................................................. 151

Chapter 7. Case studies

The Peruvian experience in managing dead bodies in disaster situations: The Mesa Redonda fire, 2001 ................................................. 153
  Introduction .................................................. 153
  Actions of the Public Prosecutor’s Office .................................. 154
  Actions of the Legal Medicine Institute of Peru ............................ 155
  Activities of the Public Ministry ......................................... 155
## Contents

**Final recommendations** .................................................. 171

**Myths and realities of management of dead bodies in disasters** ................................................................. 172

**Glossary** ............................................................... 173
FOREWORD

Our Region has been the victim of different types of disasters that have had significant, long-term consequences for the development of communities, intensifying the poverty and increasing obstacles to progress, particularly among populations with scarce economic resources.

Death does not end human suffering, especially when death is sudden, as the result of a disaster. The death of a loved one leaves an indelible mark on the survivors, and unfortunately, because of the lack of information, the families of the deceased suffer additional harm because of the inadequate way that the bodies of the dead are handled. These secondary injuries are unacceptable, particularly if they are the consequence of direct authorization or action on the part of the authorities or those responsible for humanitarian assistance.

Regrettably, we continue to be witness to the use of common graves and mass cremations for the rapid disposal of dead bodies owing to the myths and beliefs that corpses pose a high risk for epidemics. The most serious aspect is that these measures are carried out without respecting identification processes or preserving the individuality of the deceased. Not only do these actions go against the cultural and religious practices of a population, but they have social, psychological, emotional, economic, and legal repercussions regarding the legacy of the deceased, which exacerbate the damage caused by the disaster.

The State has a critical role in standardizing and guiding the tasks of handling dead bodies (recovery, identification, transfer, and final disposal), ensuring that legal norms are followed, and guaranteeing that the dignity of the deceased and their families is respected in accordance with their cultural values and religious beliefs.

The Pan American Health Organization (PAHO) is pleased to present this manual, which will be very useful for authorities and those responsible for disaster prevention and response. It is our goal to ensure that the management of massive fatalities forms part of disaster preparedness and response plans, and that it is a fundamental aspect of humanitarian assistance to survivors and rehabilitation and reconstruction programs. In this way we can preserve the memory and dignity of those who have passed before us.

Mirta Roses Periago
Director
Pan American Health Organization
INTRODUCTION

“We should treat the dead with respect. In death, money doesn't matter, material possessions don't matter; dignity is what we should care about.”—statement by Gung Tresna, Lifeguard at Kuta Beach following the terrorist attack in Bali, Indonesia.

Major disasters occurring in this Region, regardless of their origin, have had one thing in common: an enormous number of fatalities. Hurricane Mitch in Central America, floods in Venezuela, the earthquake in El Salvador, hurricanes in the Caribbean, and disasters of human origin—such as the Mesa Redonda fire in Lima, wars, or aviation accidents, to name a few—have resulted in many deaths. Each disaster has yielded important evidence about handling bodies, particularly when the number of dead overwhelms the capacity of a country to effectively respond to an emergency.

Immediately following the onset of a disaster, it is essential for national, regional, or local authorities to concentrate their actions and resources on three basic activities: first, the rescue and treatment of survivors; second, the repair and maintenance of basic services; and, finally, the recovery and management of bodies.

Controversy has always surrounded the handling of mass fatalities. Myths about treatment of the dead are strongly rooted in culture. Contemplating massive measles vaccination campaigns after an earthquake because of the fear that corpses could transmit this disease, or burying or incinerating corpses without completing required identification processes because of the supposed contamination risk they pose, are just two examples of the myths that form part of the popular culture. Despite efforts by experts to dispel these and other beliefs, certain fallacies have led and continue to lead to unacceptable practices in managing dead bodies. For example, after the earthquake in India in 2001, in which the number of fatalities approached 100,000, the bodies recovered were cremated. The wood supply was quickly exhausted, leaving the survivors without enough fuel for cooking or heating.¹

Considering these factors, PAHO’s Area on Emergency Preparedness and Disaster Relief has developed this manual as a tool to be used by national and local authorities and professionals from public institutions that are affected by this issue.

This manual provides the technical information that will support the correct approach to handling dead bodies, taking into account the following principles:

- When death is the result of a disaster, the body does not pose a risk for infection;
- Victims should never be buried in common graves;
- Mass cremation of bodies should never take place when this goes against the cultural and religious norms of the population;

Every effort must be taken to identify the bodies. As a last resort, unidentified bodies should be placed in individual niches or trenches, which is a basic human right of the surviving family members.
ACKNOWLEDGEMENTS

The preparation and technical review of this publication are the result of the valuable support of many professional from the countries of the Region of the Americas, under the general coordination of Gustavo Iturralde, with the counsel of Jean Luc Poncelet and Ciro Ugarte of the Area on Emergency Preparedness and Disaster Relief of the Pan American Health Organization.

In particular, we would like to acknowledge the excellent contributions made by the authors of the chapters of this manual: Jorge González and Alicia Basanta, Beatriz Lizárraga, Karl Western, Mary Luz Morales and Marlén Quintero, Jorge Rodríguez and Susana Castiglione, Judith Romero, and Zacarías Duarte. The publication would not have been possible without their collaboration.

We would also like to thank the following individuals and institutions who provided valuable comments during the review process of the manual: Judith Maguiña of the Instituto de Medicina Legal (Legal Medicine Institute) in Peru; Hugo Argüello and Zacarías Duarte of the Instituto de Medicina Legal in Nicaragua; Amílcar Rodas of the Department of Forensic Medicine in Honduras; Eduardo Fuhrer of the Agriculture and Livestock Service of the Ministry of Agriculture in Chile; and María Estela García of the Instituto de Medicina Legal of El Salvador.

We would also like to acknowledge the support of various national and international organizations: the Attorney General’s Office and Public Ministry of Peru; the Legal Medicine Institute, the Ministry of Social Welfare, and the National Directorate for Disaster Prevention and Response (DNPAD) of Colombia; the Civil Defense of Nicaragua; and the World Bank.

Contributions from other regional offices of the World Health Organization, as well as from other international organizations increased the scope of the publication. We would like to acknowledge, in particular, the assistance of Michel Thieren, Eric Noji, and Luis Jorge Pérez.

Mary Elizabeth Stonaker edited the final English version of the manual under the general supervision of Ricardo Pérez of the Area on Emergency Preparedness and Disaster Relief of PAHO/WHO.

Many other individuals enhanced this text with their comments and suggestions. We are grateful to all of you.
