| Problems with service coverage and access, service quality and financial hardship | Sense making  
Preparation of evidence based guidance documents and tools | 1. Build a stronger knowledge base about how regulation and governance can be used in practice to support UHC |
| Weak or non-existent laws and institutional mechanisms orientated towards UHC | Creation of usable knowledge  
Creation of a repository of case studies, laws and other research | 2. Build capacity and capability in WHO and in countries to undertake this work |
| Gaps in knowledge about how to develop effective laws and institutions to help achieve UHC | Technical assistance  
Provide direct legal and policy support | 3. Build collaboration between WHO, countries and partners across sectors in support of effective regulation and governance for UHC |
| Practical difficulties with developing and implementing laws and institutions for UHC | Build capability and capacity to help  
Develop regional networks of local consultants and experts | 4. Support countries to design and implement effective locally owned regulation and governance mechanisms |

Support countries to move towards universal health coverage
