WHO studied data from 83 countries:

**GOOD** performance is happening at low spending levels

- 82% of low-income countries achieve an 80% treatment success rate for new TB cases.
- 57% of low-income countries achieve 80% coverage of the DTP3 vaccine.

**POOR** performance is happening at high spending levels

- 30% of upper-middle income countries do not achieve 80% coverage of modern methods for family planning.
- 0% of countries achieve 80% ART coverage for HIV.

Health spending targets: no magic number

Increasing public spending on health is central to making progress towards universal health coverage (UHC), but even at low spending levels countries can make progress.

- 82% of low-income countries achieve 80% treatment success rate for new TB cases.
- 57% of low-income countries achieve 80% coverage of the DTP3 vaccine.
- 30% of upper-middle income countries do not achieve 80% coverage of modern methods for family planning.
- 0% of countries achieve 80% ART coverage for HIV.

Health spending targets: no magic number
