Head Action on Antibiotic Resistance (ReAct) Africa
Executive Director Ecumenical Pharmaceutical Network (EPN)
Transforming our world: the 2030 Agenda for Sustainable Development

Promoting health, promoting sustainable development: it’s our health, our future and our choice.
AMR Strikes the hardest on the poor

“...more than any other issue, poverty and inadequate access to drugs continue to be a major force in the development of resistance.”*

Treatment of drug resistant infections:
• Costlier
• Takes longer
• Has lower chances of success

As a result, AMR negatively impacts national and individual economy.

Clean water and sanitation

- Antibiotic residues from hospitals, antibiotic manufacturing plants and agriculture can be carried by water.
- Even very low antibiotic concentrations may be enough to select for highly resistant bacteria.
- Lack of access to clean water and sanitation facilitates the spread of bacterial diseases leading to increased morbidity and mortality, especially in children.
US$100 trillion by 2050*

The costs for antibiotic resistance reach far beyond the health sector

Promoting health, promoting sustainable development: it’s our health, our future and our choice.
Access vs. excess dilemma

Access
For millions of people without antibiotics

Conservation
Of effectiveness of new and existing drugs

Innovation
Towards creating new antibacterial treatments

Promoting health, promoting sustainable development: it’s our health, our future and our choice.

Backbone of an intersectorial action

- Multi-stakeholder partnerships
- AMR Global Conservation Fund
- Means of Implementation
- Data, monitoring and accountability
- Resource management accountability

Promoting health, promoting sustainable development: it’s our health, our future and our choice.
Thank You, Asante
