

## WORLD HEALTH ORGANIZATION SATELLITE MEETING

# WHO Integrated Essential Package for HIV Prevention, Care and Treatment: IMAI/IMCI and other HIV interventions

International AIDS Society Conference Toronto, Canada

**Sunday, August 13th 2006 12:30-14:30**

**Session Room 12**

The WHO integrated essential package for HIV service delivery includes IMAI/IMCI (Integrated Management of Adolescent and Adult Illness/ Integrated Management of Childhood Illness) tools to support quality acute and chronic HIV care, ART and prevention for adults and children.

The essential package also includes TB-HIV co-management, reproductive choices and family planning, interventions for PMTCT and most at-risk populations, and palliative care. Tools are provided to support community treatment preparedness and prevention promotion, district management, a standardized patient tracking system, and facility drug supply management. This service delivery approach supports rapid scale-up through decentralized delivery at district hospitals, primary care facilities, and in the community.

### *Presentations:*

#### *WHO integrated essential package to scale up HIV prevention, care and treatment in the health sector*

Dr Sandy Gove

IMAI Coordinator, Department of HIV/AIDS, World Health Organization
