Cold life without openings 35 hours at +43°C

COMMENTS
Test Report: CEMAFROID CPS140907 (September 2007)
Meets WHO/UNICEF Standard E4/VC2
Model Antifreeze backpack comes in flat packing, and must be assembled by the user based on the pictorial
guidelines provided. Inside surface of the lid has a table and a thermometer for user to decide the number of
icepacks required based on the ambient temperature. Five icepacks are required at the 43°C ambient to secure
35 hours of cold life without openings. Less icepacks are required at lower temperatures. Ice packs do not need
to be conditioned, they must be loaded as fully frozen in this carrier, the system is designed to prevent freezing
temperatures in the vaccine compartment. It is designed with self-gripping strips to allow users to carry it as a
backpack.
