Country list

Yellow fever vaccination
requirements and recommendations; malaria situation; and
other vaccination requirements

Introduction

The information provided for each country includes the country’s stated requirements for yellow fever vaccination, WHO recommendation for travellers regarding yellow fever vaccinations, details concerning the malaria situation and recommended prevention of the disease, and other vaccination requirements for travellers.2,3

Yellow fever

Yellow fever vaccination

Yellow fever vaccination is carried out for two different purposes:

1. To prevent the international spread of the disease by protecting countries from the risk of importing or spreading the yellow fever virus. These are requirements established by the country.

The countries that require proof of vaccination are those where the disease may or may not occur and where the mosquito vector and potential non-human primate hosts of yellow fever are present. Any importation of the virus into such countries by infected travellers could result in its propagation and establishment, leading to a permanent risk of infection for the human population. Proof of vaccination is often required for travellers arriving from countries with risk of yellow fever transmission and sometimes for travellers in transit through such countries.

A meeting of yellow fever experts organized in 2010 proposed that under 12 hours of airport transit the risk of yellow fever is almost non-existent and therefore that a proof of vaccination might not be necessary. This information is being provided to WHO Member States, but travellers are recommended to consult individual country requirements by contacting the embassy of each country they intend to visit. It should be noted that some countries require proof of vaccination from all travellers.

Countries requiring yellow fever vaccination for entry do so in accordance with the International Health Regulations. Country requirements are subject to change at any time. Updates can be found at: http://www.who.int/ith. This chapter contains information on yellow fever requirements as provided by countries.

The fact that a country has no requirement for yellow fever vaccination does not imply that there is no risk of yellow fever transmission.

2. To protect individual travellers who may be exposed to yellow fever infection.

The risk of yellow fever transmission depends on the presence of the virus in the country in humans, mosquitoes or animals. As yellow fever is frequently fatal for those who have not been vaccinated, vaccination is recommended for all travellers (with few exceptions, Chapter 6) visiting areas where there is a risk of yellow fever transmission.

WHO determines those areas where “a risk of yellow fever transmission is present” on the basis of the diagnosis of cases of yellow fever in humans and/or animals, the results of yellow fever sero-surveys and the presence of vectors and animal reservoirs.4

Decisions regarding the use of yellow fever vaccine for travellers must weigh several factors, including the risk of travel-associated yellow fever virus disease, country requirements, and the potential for serious adverse events following yellow fever vaccination (Chapter 6).

The table below summarizes WHO’s revised recommendations for yellow fever vaccination for travellers.

<table>
<thead>
<tr>
<th>Yellow fever vaccination category</th>
<th>Rationale for recommendation</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Recommended</strong></td>
<td>Yellow fever vaccination is recommended for all travellers ≥9 months old in areas where there is evidence of persistent or periodic yellow fever virus transmission.</td>
<td></td>
</tr>
<tr>
<td><strong>Generally not recommended</strong></td>
<td>Yellow fever vaccination is generally not recommended in areas where there is low potential for yellow fever virus exposure (no human yellow fever cases ever reported and evidence to suggest only low levels of yellow fever virus transmission in the past). However, vaccination might be considered for a small subset of travellers to these areas, who are at increased risk of exposure to mosquitoes or unable to avoid mosquito bites. When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g. age, immune status) for serious vaccine-associated adverse events.</td>
<td></td>
</tr>
</tbody>
</table>

Annex 1 provides a summary list of countries with risk of yellow fever transmission in whole or in part, as well as a list of countries that require proof of yellow fever vaccination as a condition for entry.
Other diseases

Cholera. No country reports a requirement for a certificate of vaccination against cholera as a condition for entry. For information on selective use of cholera vaccines, see Chapter 6.

Smallpox. Since the global eradication of smallpox was certified in 1980, WHO does not recommend smallpox vaccination for travellers.

Other infectious diseases. Information on the main infectious disease threats for travellers, their geographical distribution, and corresponding precautions are provided in Chapter 5. Chapter 6 provides information on vaccine-preventable diseases.

Malaria

General information about malaria, its geographical distribution and details of preventive measures are included in Chapter 7. Protective measures against mosquito bites are described in Chapter 3. Specific information for each country is provided in this section, including epidemiological details for all countries with malarious areas (geographical and seasonal distribution, altitude, predominant species, reported resistance). The recommended prevention is also indicated. For each country, recommended prevention is decided on the basis of the following factors: the risk of contracting malaria; the prevailing species of malaria parasites in the area; the level and spread of drug resistance reported from the country; and the possible risk of serious side-effects resulting from the use of the various prophylactic drugs. Where *Plasmodium falciparum* and *P. vivax* both occur, prevention of falciparum malaria takes priority. Unless the malaria risk is defined as due “exclusively” to a certain species (*P. falciparum* or *P. vivax*), travellers may be at risk of any of the parasite species, including mixed infections. *P. falciparum* resistance to chloroquine and sulfadoxine–pyrimethamine is at present nearly universal and is no longer specifically mentioned in the country list below; these two medications currently have no role in the prevention or treatment of falciparum malaria in travellers.

The numbers A, B, C and D refer to the type of prevention based on the table below.

---

1. For the purpose of this publication, the terms “country” and “countries” cover countries, territories and areas.
2. Please note that the requirements for vaccination of infants over 6 months of age by some countries are not in accordance with WHO’s advice (Chapter 6). Travellers should, however, be informed that the requirement exists for entry into the countries concerned.
3. WHO publishes these requirements for informational purposes only; this publication does not constitute an endorsement or confirmation that such requirements are in accordance with the provisions of the International Health Regulations.
4. More extensive descriptions of the classifications that define areas with risk of yellow fever virus transmission can be found at http://www.who.int/ith/YFrisk.pdf. These classifications inform the vaccine recommendations listed here.

<table>
<thead>
<tr>
<th>Malaria risk</th>
<th>Type of prevention</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type A</td>
<td>Very limited risk of malaria transmission</td>
</tr>
<tr>
<td>Type B</td>
<td>Risk of <em>P. vivax</em> malaria only</td>
</tr>
<tr>
<td>Type C</td>
<td>Risk of <em>P. falciparum</em> malaria, in combination with reported chloroquine and sulfadoxine–pyrimethamine resistance</td>
</tr>
<tr>
<td>Type D</td>
<td>Risk of <em>P. falciparum</em> malaria in combination with reported multidrug resistance</td>
</tr>
</tbody>
</table>

* Alternatively, for travel to rural areas with low risk of malaria infection, mosquito bite prevention can be combined with stand–by emergency treatment (SBET).

*b In certain areas with multidrug-resistant malaria, mefloquine chemoprophylaxis is no longer recommended. At present these areas include Cambodia, southeastern Myanmar and Thailand.

| Argentina        | Country requirement: no Yellow fever vaccine recommendation: yes  
Recommended for travellers over 9 months of age going to Corrientes and Misiones Provinces  
Generally not recommended for travellers going to Formosa Province and designated areas (Map) of Chaco, Jujuy and Salta provinces  
Not recommended for travellers whose itineraries are limited to areas and provinces not listed above. |
Malaria (2013): Malaria risk is exclusively due to *P. vivax* and is very low, being limited to the Departments of Oran and San Martin in Salta Province in the north of the country, and to a lesser extent to Corrientes and Misiones Provinces. No risk is present in other areas of the country.

Recommended prevention in risk areas: A

ARMENIA

Yellow fever (2013)
Country requirement: no
Yellow fever vaccine recommendation: no

AUSTRALIA

Yellow fever (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission, excluding Galapagos Islands in Ecuador, the island of Tobago and limited to Misiones province in Argentina

Yellow fever vaccine recommendation: no

AUSTRIA

Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

AZERBAIJAN

Yellow fever
Country requirement: no
Yellow fever vaccine recommendation: no

Malaria (2013): Malaria risk due exclusively to *P. vivax* exists from June to October inclusive in lowland areas, mainly in the area between the Kura and Arax rivers. There is no malaria transmission in Baku city (the capital city). No locally acquired cases were reported in 2013.

Recommended prevention in risk areas: A

AZORES see PORTUGAL

BAHAMAS

Yellow fever (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission excluding Guyana, Suriname, and Trinidad and Tobago but including Sao Tome and Principe, Somalia and United Republic of Tanzania and travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission (with the previous exclusions and inclusions).

Yellow fever vaccine recommendation: no

BAHRAIN

Yellow fever (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers over 9 months of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

BANGLADESH

Yellow fever
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria (2013): Malaria risk exists throughout the year, but transmission occurs only in rural areas, in 13 of 64 districts. The risk is high in Chittagong Hill Tract districts (Bandarban, Rangamati and Khagrachari), Chittagong district and Cox Bazaar district. Low risk exists in the districts of Hobigonj, Kurigram, Moulibazar, Mymensingh, Netrakona, Sherpur, Sunamgonj and Sylhet. Most parts of the country, including Dhaka City, have no risk of malaria.

Recommended prevention in risk areas: C
### BARBADOS

**Yellow fever** (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission except Guyana and Trinidad and Tobago and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

### BELARUS

**Yellow fever** (2013)
Country requirement: no

Yellow fever vaccine recommendation: no

### BELGIUM

**Yellow fever** (2013)
Country requirement: no

Yellow fever vaccine recommendation: no

### BELIZE

**Yellow fever** (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**Malaria** (2013): Malaria risk due predominantly to *P. vivax* presents in some areas of Stan Creek and negligible elsewhere.
Recommended prevention in risk areas: A

### BENIN

**Yellow fever** (2013)
Country requirement: a yellow fever vaccination certificate is required from all travellers over 1 year of age.

Yellow fever vaccine recommendation: yes

**Malaria** (2013): Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country.
Recommended prevention: C

### BERMUDA

**Yellow fever**
Country requirement: no

Yellow fever vaccine recommendation: no

### BHUTAN

**Yellow fever** (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers arriving from countries with risk of yellow fever transmission and for all travellers having transited through the airport of a country with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**Malaria**: Malaria risk exists throughout the year in the southern belt of the country comprising seven districts: Chukha, Dagana, Pemagatshel, Samdrup, Jonkhar, Samtse, Sarpang and Zhemgang. No transmission occurs in the four following districts: Bumthang, Gasa, Paro and Thimphu. Seasonal transmission during the rainy summer months occurs in focal areas the rest of the country.
Recommended prevention in risk areas and seasons: C

### BOLIVIA (PLURINATIONAL STATE OF)

**Yellow fever** (2014)
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

Recommended for all travellers aged 9 months of age and over travelling to the following area east of the Andes at altitudes below 2300 m: the entire departments of Beni, Pando and Santa Cruz, and designated areas (Map) of the departments of Chuquisaca, Cochabamba, La Paz and Tarija.
Malaria (2014): Malaria risk due predominantly (94%) to *P. vivax* present throughout the year in the whole country below 2500 m. *P.falciparum* present in Santa Cruz and in the northern departments of Beni and Pando, especially in the localities of Guayaramerín and Riberalta.

**BOSNIA AND HERZEGOVINA**

**Yellow fever**
- Country requirement: no
- Yellow fever vaccine recommendation: no

**BOTSWANA**

**Yellow fever** (2013)
- Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from or having passed through countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.
- Yellow fever vaccine recommendation: no

**Malaria** (2013): Malaria risk due predominantly to *P. falciparum* exists from November to May/June in the northern parts of the country: Bobirwa, Boteti, Chobe, Ngamiland, Okavango, Tutume districts/sub-districts.

**Recommended prevention in risk areas:** C

**BRAZIL**

**Yellow fever** (2014)
- Country requirement: no
- Yellow fever vaccine recommendation: yes

*Recommended for travellers over 9 months of age going to the states of Acre, Amapá, Amazonas, Distrito Federal (including the capital city of Brasília), Goiás, Maranhão, Mato Grosso, Mato Grosso do Sul, Minas Gerais, Pará, Rondônia, Roraima and Tocantins, and designated areas (Map) of the following states: Bahia, Paraná, Piauí, Rio Grande do Sul, Santa Catarina and São Paulo. Vaccination is also recommended for travellers visiting Iguazu Falls.*

*Not recommended for travellers whose itineraries are limited to areas not listed above, including the cities of Fortaleza, Recife, Rio de Janeiro, Salvador and São Paulo (Map).*

**Malaria:** In the states outside the administrative region of the Amazones, the risk of malaria transmission is negligible or non-existent. Malaria risk – *P. vivax* (86%), *P. falciparum* (13%), mixed infections (1%) – is present in most forested areas below 900 m within the nine states of the Amazon region (Acre, Amapá, Amazonas, Maranhão (western part), Mato Grosso (northern part), Pará (except Belém City), Rondônia, Roraima and Tocantins (western part). Transmission intensity varies from one municipality to another, and is higher in jungle mining areas, in agricultural settlements, in indigenous areas and in some peripheral urban areas of Cruzeiro do Sul, Manaus and Porto Velho. Malaria also occurs on the periphery of large cities such as Boa Vista, Macapá, Maraba, Rio Branco and Santarém.

**Recommended prevention in risk areas:** C

**BRITISH VIRGIN ISLANDS**

**Yellow fever**
- Country requirement: no
- Yellow fever vaccine recommendation: no

**BRUNEI DARUSSALAM**

**Yellow fever** (2013)
- Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.
- Yellow fever vaccine recommendation: no

**Malaria** (2013): Human *P. knowlesi* infection reported.

**Recommended prevention:** A

**Other requirements** (2013): Polio vaccination for travellers from polio-endemic countries.

### CZECH REPUBLIC

**Yellow fever**
Country requirement: no
Yellow fever vaccine recommendation: no
**DEMOCRATIC PEOPLE’S REPUBLIC OF KOREA**

**Yellow fever**
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**Malaria:** Limited malaria risk due exclusively to *P. vivax* exists in some southern areas.

Recommended prevention in risk areas: A

**DEMOCRATIC REPUBLIC OF THE CONGO** *(FORMERLY ZAIRE)*

**Yellow fever**
Country requirement: a yellow fever vaccination certificate is required from all travellers over 1 year of age.

Yellow fever vaccine recommendation: yes

*Recommended for all travellers aged 9 months or over, except as mentioned below.*

*Generally not recommended* for travellers whose itineraries are limited to Katanga Province.

**Malaria (2013):** Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country.

Recommended prevention: C

**DENMARK**

**Yellow fever** *(2014)*
Country requirement: no

Yellow fever vaccine recommendation: no

**DJIBOUTI**

**Yellow fever**
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**DOMINICA**

**Yellow fever** *(2013)*
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**DOMINICAN REPUBLIC**

**Yellow fever**
Country requirement: no

Yellow fever vaccine recommendation: no

**Malaria (2013):** Malaria risk due exclusively to *P. falciparum* exists throughout the year, especially in the western provinces of Dajabón, Elias Pina and San Juan. Risk in other areas is low to negligible. There is no evidence of *P. falciparum* resistance to any antimalarial drug.

Recommended prevention in risk areas: B

**ECUADOR**

**Yellow fever** *(2013)*
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

*Recommended for all travellers aged 9 months or over going to the following provinces east of the Andes at altitudes below 2300 m: Morona-Santiago, Napo, Orellana, Pastaza, Sucumbios and Zamora-Chinchipe (Map).*

*Generally not recommended* for travellers whose itineraries are limited to the following provinces west of the Andes and at altitudes below 2300 m: Esmeraldas, Guayas, Los Rios, Santa Elena, Santo Domingo de los Tsachilas and designated areas of Azuay, Bolivar, Canar, Carchi, Chimborazo, Cotopaxi, El Oro, Imbabura, Loja, Pichincha and Tungurahua (Map).

*Not recommended* for travellers whose itineraries are limited to all areas above 2300 m altitude, the cities of Guayaquil and Quito, and the Galápagos Islands (Map).

**Malaria (2013):** Malaria risk – *P. vivax* (86%), *P. falciparum* (14%) – exists throughout the year below 1500 m, with moderate risk in coastal provinces. Malaria risk due to *P. falciparum* is higher in Esmeraldas Province. There is no risk in Guayaquil, Quito and other urban areas of the inter-Andean region.

Recommended prevention in risk areas: C
EGYPT

Yellow fever (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers over 9 months of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.

All arrivals from Sudan are required to possess either a vaccination certificate or a location certificate issued by a Sudanese official centre stating that they have not been in Sudan south of 15°N within the previous 6 days.

Yellow fever vaccine recommendation: no

Malaria (2013): Very limited *P. falciparum* and *P. vivax* malaria risk may exist from June to October inclusive in El Faiyum governorate (no indigenous cases reported since 1998).

Recommended prevention: none

EL SALVADOR

Yellow fever (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria (2013): Very low malaria risk due almost exclusively to *P. vivax* exists in rural areas of migratory influence from Guatemala. Sporadic vivax malaria cases are reported from other parts of the country.

Recommended prevention in risk areas: A

EQUATORIAL GUINEA

Yellow fever (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers over 6 months of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

Malaria (2013): Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country.

Recommended prevention: C

ERITREA

Yellow fever
Country requirement: a yellow fever vaccination certificate is required for travellers arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: in general, no

*Generally not recommended* for travellers going to the following states: Anseba, Debub, Gash Barka, Mae Kel and Semenawi Keih Bahri.

*Not recommended* for all other areas not listed above, including the islands of the Dahlak Archipelagos (Map).

Malaria (2013): Malaria risk – *P. falciparum* and *P. vivax* – exists throughout the year in the whole country below 2200 m. There is no risk in Asmara.

Recommended prevention in risk areas: C

ESTONIA

Yellow fever (2013)
Country requirement: no

Yellow fever vaccine recommendation: no

ETHIOPIA

Yellow fever (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

*Recommended* for all travellers aged 9 months or over, except as mentioned below.

*Generally not recommended* for travellers whose itineraries are limited to the Afar and Somali provinces (Map).

Malaria (2013): Malaria risk – approximately 60% *P. falciparum*, 40% *P. vivax* – exists throughout the year in the whole country below 2000 m. *P. vivax* resistance to chloroquine reported. There is no malaria risk in Addis Ababa.

Recommended prevention in risk areas: C

Other requirements (2013): Meningococcal meningitis vaccination

INDIA

Yellow fever
Country requirement: anyone (except infants up to the age of 6 months) arriving by air or sea without a yellow fever vaccination certificate is detained in isolation for up to 6 days if that person (i) arrives within 6 days of departure from an area with risk of yellow fever transmission, or (ii) has been in such an area in transit (except those passengers and members of the crew who, while in transit through an airport situated in an area with risk of yellow fever transmission, remained within the airport premises during the period of their entire stay and the Health Officer agrees to such exemption), or (iii) arrives on a ship that started from or touched at any port in an area with risk of yellow fever transmission up to 30 days before its arrival in India, unless such a ship has been disinfected in accordance with the procedure laid down by WHO, or (iv) arrives on an aircraft that has been in an area with risk of yellow fever transmission and has not been disinfected in accordance with the Indian Aircraft Public Health Rules, 1954, or as recommended by WHO.

The following are regarded as countries and areas with risk of yellow fever transmission:

America: Argentina, Bolivia, Brazil, Colombia, Ecuador, French Guiana, Guyana, Suriname, Trinidad (Trinidad only), Panama, Paraguay, Peru and Venezuela (Bolivarian Republic of).

Note. When a case of yellow fever is reported from any country, that country is regarded by the Government of India as a country with risk of yellow fever transmission and is added to the above list.

Yellow fever vaccine recommendations: no

Malaria (2013): Malaria risk exists throughout the year in the whole country at altitudes below 2000 m, with overall 40–50% of cases due to P. falciparum and the remainder due to P. vivax. There is no transmission in parts of the states of Himachal Pradesh, Jammu and Kashmir, and Sikkim. Risk of falciparum malaria is relatively higher in the north-eastern states, in the Andaman and Nicobar Islands, Chhattisgarh, Gujarat, Jharkhand, Karnataka (with the exception of the city of Bangalore) Madhya Pradesh, Maharashtra (with the exception of the cities of Mumbai, Nagpur, Nasik and Pune), Orissa and West Bengal (with the exception of the city of Kolkata).

Recommended prevention in risk areas: C

Other requirements (2014): Oral polio vaccination at least four weeks prior to departure for resident national travellers from polio-endemic countries (Afghanistan, Nigeria, Pakistan) and countries with poliovirus circulation following importation (Ethiopia, Kenya, Somalia, Syrian Arab Republic).

INDONESIA

Yellow fever
Country requirement: a yellow fever vaccination certificate is required for travellers over 9 months of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria: Malaria risk exists throughout the year in most areas of the five eastern provinces of East Nusa Tenggara, Maluku, North Maluku, Papua and West Papua. In other parts of the country, there is malaria risk in some districts, except in Jakarta Municipality, in cities and urban areas, as well as within the areas of the main tourist resorts. P. vivax resistant to chloroquine reported. Human P. knowlesi infection reported in the province of Kalimantan.

Recommended prevention in risk areas: C

IRAN (ISLAMIC REPUBLIC OF)

Yellow fever
Country requirement: a yellow fever vaccination certificate is required for travellers arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria: Malaria risk due to P. vivax and very limited risk due to P. falciparum exists from March to November inclusive in rural areas of the provinces of Hormozgan and Kerman (tropical part) and the southern part of Sistan-Baluchestan.

Recommended prevention in risk areas: C

IRAQ

Yellow fever (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers over 6 months of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria (2013): Limited malaria risk – due exclusively to P. vivax – may exist from May to November inclusive in areas in the north below 1500 m (Duhok, Erbil and Sulaimaniya provinces). No indigenous cases reported since 2009.

Recommended prevention in risk areas: none

Other requirements (2013): Oral polio vaccination

Malaria (2013):
Malariarisk due predominantly to P. falciparum exists throughout the year in the whole country.
Recommended prevention: C

MYANMAR (FORMERLY BURMA)

Yellow fever (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers aged over 1 year arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission. Nationals and residents of Myanmar are required to possess certificates of vaccination on their departure to an area with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

Malaria (2013):
Malariarisk due predominantly to P. falciparum exists throughout the year in remote rural, hilly and forested areas of the country as well as in some coastal areas in Rakhine State. There is no transmission in cities and urban areas. The central plains and the dry zone are generally free of malaria but some pockets of transmission still exist. Mefloquine resistance reported in Kayin state and the eastern part of Shan state. Emerging artemisinin resistance suspected in south-eastern Myanmar. P. vivax resistance to chloroquine reported. Human P. knowlesi infection reported.
Recommended prevention in risk areas: C; in south-eastern Myanmar: D

NAMIBIA

Yellow fever
Country requirement: a yellow fever vaccination certificate is required for travellers arriving from countries with risk of yellow fever transmission. The countries, or parts of countries, included in the endemic zones in Africa and South America are regarded as areas with risk of yellow fever transmission. Travellers who are on scheduled flights that originated outside the countries with risk of yellow fever transmission, but who have been in transit through these areas, are not required to possess a certificate provided that they remained at the scheduled airport or in the adjacent town during transit. All travellers whose flights originated in countries with risk of yellow fever transmission or who have been in transit through these countries on unscheduled flights are required to possess a certificate. The certificate is not insisted upon in the case of children under 1 year of age, but such infants may be subject to surveillance.
Yellow fever vaccine recommendation: no

Malaria (2013):
Malariarisk due predominantly to P. falciparum exists from November to June inclusive in the following regions: Ohangwena, Omaheke, Omusati, Oshana, Oshikoto and Otjozondjupa. Risk exists throughout the year along the Kunene river and in Caprivi and Kavango regions.
Recommended prevention in risk areas: C
NAURU

Yellow fever
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

</table>

**Recommended for all travellers aged 9 months or over travelling to all mainland areas east of the area surrounding Canal (the entire Comarcas of Emberá and Kuna Yala, the province of Darién and areas of the provinces of Colón and Panama that are east of the Canal) (Map).**

**Not recommended for travellers whose itineraries are limited to areas west of canal, the city of Panama, the canal area itself, and the Balboa Islands (Pearl Islands) and San Blas Islands (Map).**

**Malaria:** Malaria risk due predominantly to *P. vivax* (99%) exists throughout the year in provinces and Comarcas along the Atlantic coast and the borders with Costa Rica and Colombia: Bocas del Toro, Chiriquí, Colón, Darién, Kuna Yala, Ngäbe Buglé, Panama and Veraguas. In Panama City, in the Canal Zone and in the other provinces there is no or a negligible risk of transmission.

**Recommended prevention in risk areas:** B in eastern endemic areas bordering Colombia: C
PAPUA NEW GUINEA

Yellow fever
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria: Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country below 1800 m. *P. vivax* resistant to chloroquine reported.

Recommended prevention in risk areas: C

PARAGUAY

Yellow fever (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

Recommended for all travellers aged 9 months or over, except as mentioned below.

*Generally not recommended* for travellers whose itineraries are limited to the city of Asunción.

Malaria (2013): Malaria risk due almost exclusively to *P. vivax* is moderate in certain municipalities of the departments of Alto Paránà and Caaguazú. In other departments there is no or negligible transmission risk.

Recommended prevention in risk areas: A

Other requirements (2013): Measles and Rubella vaccination

PERU

Yellow fever (2013)
Country requirement: no

Yellow fever vaccine recommendation: yes

Recommended for all travellers aged 9 months or over going to the following areas at altitudes below 2300 m: the Regions of Amazonas, Loreto, Madre de Dios, San Martín, Ucayali, Puno, Cuzco; Junín, Pasco and Huánuco and designated areas (Map) of the following Regions far-north of Apurímac; far-northern Huancavelica; far-north-eastern Ancash; eastern La Libertad; northern and eastern Cajamarca; northern and north-eastern Ayacucho, and eastern Piura.

*Generally not recommended* for travellers whose itineraries are limited to the following areas west of the Andes: Regions of Lambayeque and Tumbes and the designated areas (Map) of western Piura and south, west and central Cajamarca.

*Not recommended* for travellers whose itineraries are limited to the following areas: all areas above 2300 m altitude, areas west of the Andes not listed above, the cities of Cuzco and the capital city of Lima, Machu Picchu, and the Inca Trail (Map).

Malaria (2013): Malaria risk – *P. vivax* (87%), *P. falciparum* (13%) – exists throughout the year in rural areas at altitudes below 2000 m. The 23 highest-risk districts are concentrated in the regions of Ayacucho, Loreto, Madre de Dios, Piura, Pasco. Ninety-nine percent of *P. falciparum* cases are reported from Loreto, which is situated in the Amazon and contains 17 of the highest-risk districts in the country. *P. vivax* resistance to chloroquine reported.

Recommended prevention in risk areas: B in *P. vivax* risk areas; C in Loreto

PHILIPPINES

Yellow fever (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission and for all travellers having transited through the airport of a country with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

Malaria (2013): Malaria risk exists throughout the year in areas below 600 m, except in the 22 provinces of Aklan, Albay, Benguet, Biliran, Bohol, Camiguin, Capiz, Catarman, Cavite, Cebu, Guimaras, Iloilo, Northern Leyte, Southern Leyte, Marinduque, Masbate, Eastern Samar, Northern Samar, Western Samar, Siquijor, Sorsogon, Surigao Del Norte and metropolitan Manila. No risk is considered to exist in urban areas or in the plains. Human *P. knowlesi* infection reported in the province of Palawan.

Recommended prevention in risk areas: C

Country requirement: no
Yellow fever vaccine recommendation: no

### SRI LANKA

**Yellow fever** (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers over 9 months of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.
Yellow fever vaccine recommendation: no

**Malaria** (2013): Limited malaria risk – *P. vivax* (88%), *P. falciparum* (12%) – exists throughout the year, except in the districts of Colombo, Galle, Gampaha, Kalutara, Matale and Nuwara Eliya. No locally acquired cases reported in 2013.
Recommended prevention in risk areas: A
**SUDAN**

Yellow fever
Country requirement: A yellow fever vaccination certificate is required for travellers over 9 months of age arriving from countries with risk of yellow fever transmission. A certificate may be required for travellers departing Sudan.

Yellow fever vaccine recommendation: yes

*Recommended for all travellers aged 9 months or over travelling to areas south of the Sahara desert (Map).*

*Not recommended for travellers whose itineraries are limited to areas in the Sahara desert and the city of Khartoum (Map).*

Malaria: Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country. Risk is low and seasonal in the north. It is higher in the central and southern parts of the country. Malaria risk on the Red Sea coast is very limited.

Recommended prevention: C

**SURINAME**

Yellow fever (2013)
Country requirement: A yellow fever vaccination certificate is required for travellers over 1 year of age arriving from countries with risk of yellow fever transmission.

Yellow fever vaccine recommendation: yes

Malaria (2013): Malaria risk due predominantly to *P. falciparum* (40%), *P. vivax* (58%), mixed infections 2% – continues to decrease in recent years. Malaria occurs throughout the year in the interior of the county beyond the coastal savannah area, with highest risk mainly along the eastern border and in gold-mining areas. In Paramaribo city and the other seven coastal districts, transmission risk is low or negligible. *P. falciparum* resistant to chloroquine, sulfadoxine–pyrimethamine and mefloquine reported. Some decline in quinine sensitivity also reported.

Recommended prevention in risk areas: C

**Malaria:** Malaria risk due predominantly to *P. falciparum* exists throughout the year, but mainly from September to February inclusive, in the whole country below 2000 m. There is no risk in Sana'a city. Malaria risk on Socotra Island is very limited.

Recommended prevention in risk areas: C; Socotra Island: A

**ZAIRE** see **DEMOCRATIC REPUBLIC OF THE CONGO**

**ZAMBIA**

Yellow fever (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers over 9 months of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.

Yellow fever vaccine recommendation: in general, no

*Generally not recommended* for travellers going to the following areas: the entire North West and Western provinces

*Not recommended* in all other areas not listed above.

**Malaria** (2013): Malaria risk due predominantly to *P. falciparum* exists throughout the year in the whole country.

Recommended prevention: C

**ZIMBABWE**

Yellow fever (2013)
Country requirement: a yellow fever vaccination certificate is required for travellers over 9 months of age arriving from countries with risk of yellow fever transmission and for travellers having transited more than 12 hours through the airport of a country with risk of yellow fever transmission.

Yellow fever vaccine recommendation: no

**Malaria** (2013): Malaria risk due predominantly to *P. falciparum* exists from November to June inclusive in areas below 1200 m and throughout the year in the Zambezi valley. In Bulawayo and Harare, the risk is negligible.

Recommended prevention in risk areas: C

---

1 Yellow fever vaccination is *generally not recommended* in areas where there is low potential for exposure to yellow fever virus. However, vaccination might be considered for a small subset of travellers to these areas, who are at increased risk of exposure to yellow fever virus (e.g. prolonged travel, extensive exposure to mosquitoes, inability to avoid mosquito bites). When considering vaccination, any traveller must take into account the risk of being infected with yellow fever virus, country entry requirements, as well as individual risk factors (e.g. age, immune status) for serious vaccine-associated adverse events.
