WHO CHOLERA KITS

Cholera is an acute diarrhoeal disease that can kill within hours if left untreated.

Researchers have estimated that each year there are up to 4M cases and up to 143K deaths.

This graphic provides examples of what is inside the cholera kits.

WHO’s cholera kits are tailor-made to prepare for outbreaks and to meet the needs for the initial response.

TREATMENT KITS

There are 3 kinds of treatment kits that each have supplies for 100 people: central, periphery and community.

INVESTIGATION AND LAB KITS

Supplies to collect and process 100 patient samples.

HARDWARE KITS

To create pop-up clinics where none exists.
