Dominica

GENERAL INFORMATION

Dominica is a country with an approximate area of one thousand square kilometers (UNO, 2008) and a population of 66,515 (UNO, 2009). The proportion of the population under the age of 18 years is 19%. Literacy rates and life expectancies for both men and women are unknown. The only data available regarding life expectancy is the healthy life expectancy of males, which is 65 years (UNPD, 2010) and for females is 67%. The country is in the upper middle income group (based on 2010 World Bank criteria). The total expenditure on health as a percentage of gross domestic product is 6.37% and the per capita government expenditure on health (PPP int. $) is $307.0 (WHO, 2006). Suicide rate information is not available. In Dominica, neuropsychiatric disorders are estimated to contribute to 25.3% of the global burden of disease (WHO, 2008).

GOVERNANCE

An officially approved mental health policy does not exist and mental health is not specifically mentioned in the general health policy.

A mental health plan does not exist.

Dedicated mental health legislation exists and was initiated, or most recently revised, in 1986. Legal provisions concerning mental health are not covered in other laws (e.g., welfare, disability, general health legislation etc.).

FINANCING

Mental health expenditures by the government health department/ministry are 3.22% of the total health budget. Mental hospital expenditures are not available.

MENTAL HEALTH CARE DELIVERY

Primary Care

Prescription regulations authorize primary health care doctors to prescribe and/or to continue prescription of psychotherapeutic medicines. Similarly, the department of health authorizes primary health care nurses to prescribe and/or to continue prescription of psychotherapeutic medicines, but with restrictions. It is unknown whether official policy allows primary health care nurses to independently diagnose and treat mental disorders within the primary care system.
### Mental Health Services
