PSYCHOACTIVE SUBSTANCE USE AMONG ADOLESCENTS IN THE WHO AFRICAN REGION

Prevalence of lifetime drunkenness

The figure below is based on data from the WHO Global School-based Student Health Survey (GSHS) and presents data of 13-15 year old students living in 14 countries in the WHO African Region. The figure shows the percentage of all students who have been drunk one to two times, three to nine times, or ten times or more during their lifetime. The remaining students have never been drunk.

Prevalence (%) of lifetime drunkenness among adolescents in the WHO African Region - Both Sexes

GSHS was conducted between 2004 and 2009 with a national representative sample of school students (13-15 years old). Subnational data was used for the following countries due to a lack of national data at the time of publication: Tanzania and Zimbabwe.

This fact sheet was developed jointly by the WHO Surveillance and Population-based Prevention team, Department of Chronic Diseases and Health Promotion and the WHO Management of Substance Abuse team, Department of Mental Health and Substance Abuse.
