WHA23.33  Research on Alternative Methods of Vector Control

The Twenty-third World Health Assembly,

Recognizing:

(a) that vector borne diseases are public health problems of temperate and tropical climates, of developed and developing States;

(b) that the traditional chemical methods of control of disease vectors add to the burden placed upon our environment; and

(c) that the control of the vector is the most effective method of controlling the transmission of many different diseases that may blind, cripple, and kill millions,

1. COMMENDS the Director-General on the excellent report on alternative methods of vector control;\(^1\)\(^{(1)}\) and

2. RECOMMENDS that the Director-General take into account the proposed plan of work in the formulation of the regular budget for 1972.

*Handb. Res., 10th ed., 1.5*  
Fourteenth plenary meeting, 19 May 1970
