

Selected National Health Accounts indicators: measured levels of expenditure on health, 2001-2005

Data are harmonized by WHO for international comparability: they are not necessarily the official statistics of Member States, which may use alternative methods.

Member State	Total expenditure on health as % of Gross domestic product					General government expenditure on health as % of total expenditure on health ^a					Private expenditure on health as % of total expenditure on health ^a					General government expenditure on health as % of total government expenditure					External re

¹ 'n/a' Used to indicate that a cell should have an entry but no estimates could be made.

⁰ Used when there is evidence that there are no schemes that exist that are relevant to the cell. Some estimates yielding a ratio below 0.04% are rounded down to '0'.

Large external resources may lead to high THE /GDP ratio in some countries

For OECD countries, the numerators are extracted from the OECD Health Data (update October 2007) and adjusted as necessary based on correspondence with national sources.

^a The sum of the ratios of general government and private expenditures on health may not add to 100 because of rounding.

^b The GDP includes the illicit opium economy.

^c Estimates should be read with caution as these are derived from scarce data.

^d Estimates updated using newly accessed data from NHA reports, surveys, National Accounts series or information provided during national consultation.

^e Fiscal year ends in June; expenditure data have been allocated to the previous calendar year. e.g. Data for 2005 is for fiscal year 2005-06

^f Adjustments for currency change were made for the entire series

^g Adoption of SHA methodology, classifications and recommended documentary sources induced changes in the level of previously reported ratios and may constitute a break in the series between 2000 and 2005

^h The estimates do not include expenditures of Hong Kong and Macao Special Administrative Regions.

ⁱ Exchange rate changed from 2.15 Won in 2001 to 152 Won in 2002. This explains sudden changes in per capita levels between 2000 and 2005.

^j In 2005 grants accounted for 754 million pesos, loans for 675 million (a substantive downward trend for loans)

^k Benchmark revision of the GDP lowers the health expenditure to GDP ratio compared to previous levels.

^l Increases in the International dollar rates decreased the per capita levels compared with previous releases.

^m Exchange rate changed in 2002 from multiple to a managed floating exchange rate. Inter-bank market rate used prior to 2002.

ⁿ The estimates do not include expenditures of Northern Iraq.

^o The public expenditure on health includes contributions from the United Nations Relief and Works Agency for Palestine Refugees in the Near East (UNRWA) to Palestinian refugees residing in Jordanian territories.

^p The market exchange rate is used to estimate the per capita figures.

^q After the Declaration of independence on 3 June 2006, Serbia and Montenegro are now separate states. Health expenditures previously reported for the former state union of Serbia and Montenegro have been partitioned accordingly.

^r The estimates do not include the expenditures of the provinces of Kosovo and Metohia, which are under the administration of the United Nations.

^s The exchange rate used for Syrian Arab Republic is the rate for non-commercial transactions from the Central Bank of Syria.

^t GDP does not include the income from petroleum.

Selected National Health Accounts indicators: measured levels of expenditure on health, 2001-2005

Sources for health as % of total expenditure on health				Social Security expenditure on health as % General government expenditure on health					Out-of-Pocket expenditure as % of private expenditure on health					Private prepaid plans as % of private expenditure on health					Per capita total expenditure
