A national survey of health care providers, managers, and the public
This is the ninth edition of the Health Care in Canada Survey, the most comprehensive survey of Canadian public and health care providers’ opinions on health care issues. The survey, which polled the Canadian public as well as doctors, pharmacists, nurses, and managers, finds widespread support for more home and community care programs, higher medical school enrolment levels, equitable access to pharmaceuticals, ensuring the security of the Canadian vaccine supply, increased funding for research, and a ban on the sale of junk food in schools. Canadians are divided on the quality of health care services currently available and the impact of allowing the purchase of private health insurance for services already covered under medicare. Canadians continue to be concerned about waiting times for elective surgery, the potential for errors while being treated in hospital, and preparedness for public emergencies such as SARS or flooding.

For the first time, the 2006 survey identified questions on Canadians’ views about the negative health impact from key environmental sources. “While Canadians continue to be concerned about health care, the study also reflects their concern about the environment. In addition, it highlights their willingness to take action personally to improve health outcomes,” says Marie Larose, Senior Vice President of POLLARA.

This document presents a summary of key findings. For full survey results, visit [www.hcic-sssc.ca](http://www.hcic-sssc.ca).

Fielding of the core questionnaire was conducted between August 14 and September 13, 2006. Results for the public survey are based on telephone interviews with nationally representative samples of 1,004 members of the Canadian public, 104 doctors, 100 nurses, 100 pharmacists, and 100 health managers. Public results are considered to be accurate within ±3.1% 19 times out of 20, while the margin of error for results for health care providers and managers is ±9.9% 19 times out of 20 (±9.7% for doctors). Questionnaires were developed by POLLARA working in close consultation with the HCIC partners.

This is the ninth annual comprehensive national survey of the public, doctors, nurses, pharmacists, and health system managers conducted by POLLARA Research. This year’s survey results provide demographic breakdowns to allow examination of responses based on gender, location and income. Survey partner organizations include the Association of Canadian Academic Healthcare Organizations, Canadian Nurses Association, Canadian Medical Association, Canadian College of Health Service Executives, Canadian Healthcare Association, Canadian Home Care Association, Canadian Public Health Association, Health Charities Coalition of Canada, Canadian Pharmacists Association, Merck Frosst Canada Ltd., and Rogers Media.
Quality of Health Care in Canada

Are Canadians getting quality health care?

who says yes, by income:

- overall: 55%
- <$25,000: 45%
- $25,000–44,999: 50%
- $45,000–64,999: 61%
- $65,000–100,000: 64%
- >$100,000: 66%

Personal Experience with the Health System

Are you having difficulty finding a doctor?

who says yes, by region:

- Atlantic: 9%
- Quebec: 28%
- Ontario: 14%
- Prairies: 14%
- Alberta: 20%
- BC/Territories: 9%

Have you cared for a family member or close friend with a serious illness in the past year?

- yes: 26%
  - people 45–64 years old: 35%

If you have cared for a family member or close friend with a serious illness in the past year, what effect has it had on you?

- had to use personal savings to survive: 41%
- took one or more months off work to care for the person: 22%
- negative effect on mental health: 41%
- negative effect on physical health: 38%
The Environment and Public Health

What environmental factors will have a worsening effect on our health over the next few years?

- air pollution: 72%
- greenhouse gases: 65%
- urban growth: 63%
- using up natural resources: 60%
- water pollution: 58%

What would you be willing to do to help the environment?

- buy more energy-efficient appliances: 64%
- drive a smaller or more fuel-efficient vehicle: 62%

Who is unprepared to limit the spread of pandemic influenza?

- employers: 62%
- schools: 56%

Have you had a flu shot in the last 12 months?

- yes: 41%
- people over 65: 67%

What parts of a national immunization strategy are important to you?

- ensuring the security of the Canadian vaccine supply: 83%
- better access to timely immunization: 76%
- regulatory and pricing systems that encourage private vaccine research: 73%
- more funding for the national immunization strategy: 71%

Should the sale of junk food in schools be banned?

- yes: 80%
Waiting times, Safety in Hospitals, and Emergency Preparedness

Do you think **waiting times** for elective surgery have gotten longer or shorter in the past 2 years?

**who says longer:**
- public: 59%
- females: 66%
- people in Atlantic Canada: 83%
- doctors: 54%
- pharmacists: 68%
- nurses: 78%
- managers: 45%

**who says shorter:**
- public: 6%
- people 65 and older: 10%
- people in BC and the Territories: 11%
- doctors: 15%
- pharmacists: 9%
- nurses: 4%
- managers: 18%

Are you likely to be subject to a serious **medical error** while being treated in a Canadian hospital?

**who says yes, somewhat or extremely likely:**
- public: 60%
- doctors: 40%
- pharmacists: 62%
- nurses: 74%
- managers: 77%

Is the health system prepared for a **public emergency** situation like flooding, or a disease outbreak like SARS?

**who says no, somewhat or very unprepared:**
- public: 39%
- doctors: 34%
- pharmacists: 32%
- nurses: 26%
- managers: 24%
Health Care in Canada Survey 2006 • Summary of findings

Personal Responsibility and Public Expenditures

Should Canadians **take responsibility** for their own health?

- Canadians should take care of their own health, prevent illnesses and injuries, and by lead a healthy lifestyle: 85%
- Canadians should work in partnership with healthcare providers to manage their health care: 79%
- Canadians who live a healthy lifestyle should be rewarded, for example by tax incentives: 50%

Role of Public Vs. Private Insurance

What would we get if Canadians could buy **private health insurance** for services covered under medicare?

- a two-tiered system: 63%
- a shortage of doctors and nurses: 62%
- increased health care costs: 55%
- shorter waiting times: 64%
- better access: 59%
- better quality: 55%

What way for people get **quicker access** to health care services covered under medicare do you support?

- the government providing more resources: 86%
- employers paying the cost of private insurance to cover the full cost of service: 58%

Would you be willing to **pay out of pocket** for faster access to specific treatments and tests?

- yes: 30%
Transforming the Healthcare System

What initiatives would you support to **improve the health system**?

- more home and community care programs: 80%
- electronic patient records: 60%
- more use of non-physician health providers: 59%
- allowing the delivery of publicly covered services to be contracted out: 51%
- paying to promote wellness and prevent disease, even if this means higher costs in the short term: 51%

How should we **increase access** to health professionals?

- increase medical school enrolment: 82%
- make it easier for international medical graduates to practice in Canada: 72%
- require health professionals to work in teams with other types of health care providers: 76%
  - doctors: 47%
  - pharmacists: 83%
  - nurses: 88%
  - managers: 94%
- require patients to register with one family doctor or other primary health care provider: 59%
- require health professionals to work in specific geographic areas: 51%
  - doctors: 15%
  - pharmacists: 44%
  - nurses: 47%
  - managers: 53%

Pharmaceuticals and Health Research

How should **coverage for medications** work?

- if one province pays for a drug, all of them should: 90%
- government plans should pay for any drug that patients and their health care provider agree is the most effective treatment: 92%
- employer-sponsored plans should pay for any drug that patients and their health care provider agree is the most effective treatment: 89%
- governments should put an upper limit on how much a person has to pay for drugs: 83%
Should **pharmacists and nurses** be allowed to **prescribe drugs** in some circumstances?
