The March of Dimes Foundation works to improve the health of babies through research, education, community service, and advocacy. We help mothers have full-term pregnancies and healthy babies. And if something goes wrong, we offer information and comfort to families. We're funding programs and helping to build a global constituency worldwide to track and prevent birth defects, premature birth and infant mortality.

The Partnership for Maternal, Newborn & Child Health joins the reproductive, maternal, newborn and child health communities into an alliance of more than 460 members to ensure that all women, infants and children not only remain healthy, but thrive. Our members come from seven constituencies working together to advance knowledge, advocacy and results for women and children: government, UN and multilateral agencies, donors and foundations, the private sector, health care professional associations, non-governmental organizations, and academic and training institutions.

Save the Children is the leading independent organization for children in need, with programs in 120 countries. We aim to inspire breakthroughs in the way the world treats children, and to achieve immediate and lasting change in their lives by improving their health, education and economic opportunities. In times of acute crisis, we mobilize rapid assistance to help children recover from the effects of war, conflict and natural disasters. Save the Children’s Saving Newborn Lives program, supported by the Bill & Melinda Gates Foundation, works in partnership with countries in Africa, Asia and Latin America to reduce newborn mortality and improve newborn health, hosting www.healthynewbornnetwork.org.

The World Health Organization is the directing and coordinating authority for health within the United Nations system. It is responsible for providing leadership on global health matters, shaping the health research agenda, setting norms and standards, articulating evidence-based policy options, providing technical support to countries and monitoring and assessing health trends.
