WHO recommendations for prevention and treatment of maternal peripartum infections

Date: 17 MAY 2016
Time: 9:00 – 10:00 CET (07:00-08:00 GMT, 15:00-16:00 CST)

Presenter: Dr Mercedes BONET
Department of Reproductive Health and Research - Maternal and Perinatal Health and Preventing Unsafe Abortion (MPA), World Health Organization, Geneva, Switzerland

Agenda:
1. Introduction: Welcome, agenda and introduction of presenter(s)
2. Overview of development and content of guideline
3. Specific recommendations in the guideline
4. WHO guideline implementation - Overview of tools and products to support use
5. Q&A – we will invite written questions from all participants

WHO envisions a world where every woman and newborn receives quality care throughout pregnancy, childbirth and the postnatal period. One of the critical strategic areas identified by WHO to realise this vision is the development and dissemination of evidence-based guidelines to improve quality of care around the time of childbirth and in the postpartum period.

In 2015, WHO launched new guidance to prevent and reduce acute disabilities and deaths associated with bacterial infection of the mother during the peripartum period. This forms part of WHO’s efforts to improve the quality of care for leading causes of maternal death, especially those clustered around the time of childbirth, in the post-MDG era.

This guideline contains 20 recommendations covering prioritized questions related to the prevention and treatment of maternal peripartum infections. This webinar will present recommendations in the guideline and guidance on implementation. The guideline can be accessed at the following link:
