Guidelines for Drinking-water Quality

Third Edition

Volume 1. Recommendations

This new edition of *WHO's Guidelines for Drinking-water Quality* provides a state-of-the-art perspective on issues of water quality and health and on effective approaches to water safety management.

The Guidelines are used by countries world-wide as a scientific basis for standard-setting and regulation and are used extensively by policy-makers, professionals and local decision-makers. They supersede five editions of guidelines and of previous International Standards.

This fully-revised third edition includes expanded coverage on systematic drinking-water safety assessment and management. It describes a "Water Safety Framework" encompassing complementary functions of national regulators, water suppliers and independent surveillance agencies. The "Water Safety Plan" provides a comprehensive approach to assist suppliers in water safety management.

Guideline Values for individual chemicals have been reviewed, updated and newly-added in response to available scientific information. Summary statements are included for specific pathogens and individual chemical hazards of actual or potential concern. This third edition also includes more information on application of the Guidelines in specific circumstances (e.g. small community supplies, in large buildings, in emergencies and disasters); and to specific applications (e.g. bottled water, water in food production...).

Volume 1 of the Guidelines also provides a "roadmap" to more than 130 documents which substantiate or explain the content of the Guidelines; and to a large series of guidance documents on "good practice" in achieving drinking-water safety.

Guidelines for Drinking-Water Quality

Second Edition. Volume 3.
Surveillance and Control of Community Supplies

A comprehensive guide to all practical procedures and technical measures required to ensure the safety of drinking-water supplies in small communities and periurban areas of developing countries. The book has been vastly expanded in line with broadened appreciation for the many factors that influence water quality and determine its impact on health. Revisions and additions also reflect considerable new knowledge about the specific technical and social interventions that have the greatest chance of success in situations where resources are scarce and logistic problems are formidable.

Safe, Piped Water: Managing Microbial Water Quality in Piped Distribution Systems

A Review of Knowledge and Practices

The development of pressurized pipe networks for supplying drinking-water to individual dwellings, buildings and communal taps is an important component in the continuing development and health of many communities. This publication considers the introduction of microbial contaminants and growth of microorganisms in distribution networks and the practices that contribute to ensuring drinking-water safety in piped distribution systems.

Water Treatment and Pathogen Control

Process Efficiency in Achieving Safe Drinking-water

This book provides a critical review of literature on removal and inactivation of pathogenic microbes in water. It aims to guide water quality specialists and design engineers in selecting treatment processes to ensure the production of high quality drinking-water. *Water treatment and Pathogen Control* is a supporting volume to WHO's *Guidelines for Drinking-water Quality*.

Assessing Microbial Safety of Drinking Water

Improving Approaches and Methods

Inadequate drinking water and sanitation are amongst the world's major causes of preventable morbidity and mortality. The book provides a state-of-the-art review on approaches and methods used in assessing the microbial safety of drinking water. It supports the rapidly emerging trends towards preventive management and a broader, system-wide outlook. It supports a framework for water supply which extends from resource to consumer and is based on rigorous risk assessment and risk management. Furthermore it offers guidance on the selection and use of available indicators alongside operational monitoring to meet specific information needs. It looks at potential applications of "new" technologies and emerging methods.
