3.3 Household water treatment
3.3.1 Boiling
3.3.2 Canvas filters
3.3.3 Candle filters
3.3.4 Disinfection
3.3.5 Settling
3.4 Safe handling of water
3.5 Monitoring water quality
3.5.1 Microbial quality
3.5.2 Sanitary inspection
3.5.3 Chemical quality
3.6 Managing community water resources
3.6.1 Preventing over-pumping of groundwater
3.6.2 Water conservation
3.6.3 Managing water for agriculture

Chapter 4. Excreta disposal
4.1 Technologies for excreta disposal
4.1.1 Cartage
4.1.2 Pit latrines
4.1.3 Septic tanks
4.1.4 Aquaprivies
4.1.5 Sewerage systems
4.2 Sewage treatment and reuse
4.2.1 Stabilization ponds
4.2.2 Wastewater and sludge reuse

Chapter 5. Drainage
5.1 Problems caused by poor drainage
5.2 Methods for improving drainage
5.2.1 Stormwater drains
5.2.2 Sullage disposal methods
5.2.3 Combined drains
5.2.4 Buried drains and combined sewers

Chapter 6. Solid waste management and chemical safety
6.1 Strategies for solid waste management: minimizing waste and recycling
6.2 Managing solid waste in households
6.2.1 Composting
6.2.2 Turning organic waste into fuel
6.3 Managing solid waste in the community
6.3.1 Communal refuse pit
6.3.2 Communal collection

6.4 Managing special solid wastes
6.4.1 Health care solid wastes
6.4.2 Slaughterhouse solid wastes
6.4.3 Industrial solid wastes

6.5 Chemical safety
6.5.1 Storage of toxic chemicals
6.5.2 Handling toxic chemicals
6.5.3 Chemicals in the home
6.5.4 Disposal of toxic chemicals

Chapter 7. Housing quality
7.1 Ventilation
7.2 Lighting
7.3 Disease vectors in the home
7.4 Overcrowding in homes

Chapter 8. Personal, domestic and community hygiene
8.1 Personal and domestic hygiene
8.1.1 Handwashing
8.1.2 Bathing
8.1.3 Laundering
8.2 Community hygiene
8.2.1 Markets
8.2.2 Animal rearing
8.3 Food hygiene
8.3.1 Food preparation in the home
8.3.2 Eating-houses
8.3.3 Street food-vendors
8.3.4 Promoting nutrition

Chapter 9. Promoting hygiene
9.1 Assessing hygiene practices
9.2 Planning hygiene promotion projects
9.3 Implementing hygiene promotion projects
9.3.1 Building community capacity
9.3.2 Organizing groups and committees
9.3.3 Situation analysis
9.3.4 Communication and education
9.4 Monitoring and evaluating hygiene projects
9.4.1 Deciding what information is needed
9.4.2 Selecting project investigators 80
9.4.3 Selecting tools for collecting information 80
9.4.4 Reviewing project findings 81
9.4.5 Feedback and dissemination of findings 81

Chapter 10. Providing health care 82
10.1 Establishing community health care programmes 84
10.2 Factors that influence the type of health care that people seek 85
10.3 Encouraging and sustaining the use of health services 86
10.4 Immunization of children 86
   10.4.1 Overcoming barriers to immunization 87
   10.4.2 Making immunization safe 89
10.5 Groups with special health care needs 90
   10.5.1 Pregnant women and infants 90
   10.5.2 The elderly 91
10.6 Risky behaviour 91
   10.6.1 Changing risky behaviour 92
   10.6.2 Health education 93
10.7 Mental health problems, learning difficulties and epilepsy 94
   10.7.1 Mental health problems 94
   10.7.2 Learning difficulties 95
   10.7.3 Epilepsy 95
   10.7.4 Social inclusion 95

Chapter 11. Establishing committees for implementing Healthy Villages programmes 97
11.1 The role of local community committees in Healthy Villages programmes 98
   11.1.1 Composition of a Healthy Villages committee 98
   11.1.2 Transparency and accountability 99
11.2 The role of local government committees in Healthy Villages programmes 99
   11.2.1 Funding and accountability 100
   11.2.2 Technical advice and support 100
11.3 The role of national committees and coordinators in Healthy Villages programmes 101

Annex 1. Organizations supporting Healthy Villages initiatives 103

Annex 2. Books and manuals providing further advice 106
Foreword

Document aims and target audience

This guide was developed to support the Healthy Villages approach for improving the health of rural communities. It provides local community leaders with a model of the type of information they may need to consider in their roles as current or prospective managers of a Healthy Villages project. Community leaders include not only elected officials, but also the health staff, respected elders and others who work to improve the health of rural communities. We outline the type of information that Healthy Villages managers could provide to their communities, as well as the basis for developing material that is specific to regions or to entire countries. Because this guide was designed to be used in many different countries, it is likely that modifications will be required at local levels to ensure that local conditions and practices are taken into account.

It is recognized that many excellent locally-developed solutions for village health problems are already being practised. This guide is not intended as a global prescription for promoting improved health in rural communities, but rather as source material from which readers can develop local solutions to local problems. The purpose of this guide, therefore, is to provide a model of the type of information and approaches for promoting healthier villages that readers can use when implementing village-level activities.

The Healthy Villages project

Many countries are developing stronger partnerships between the health sector and local government organizations to promote local “settings” initiatives for health. A Healthy Villages project assists in this by putting concepts such as hygiene education, environmental health, health promotion and environmental protection into action in rural communities. A Healthy Villages project enables a village to mobilize the human and financial resources needed to address many health and quality-of-life issues. The process works
as a communication strategy that develops political and popular health awareness and support for health issues.

Settings are major social structures that provide ways of reaching defined populations. Each setting in a village has a unique set of members, authorities, rules and participating organizations, each with interests in different aspects of the village life. For example, work settings include agriculture and small-scale industry; other settings include the food-market, the housing setting or the school setting. Generally, these structures are organized for purposes other than health. Interactions are frequent and sustained in these settings and are characterized by patterns of formal and informal membership and communication. These qualities create efficiencies in time and resources for health education programming, and offer more access and greater potential for social influence.

Villages are often defined in terms of arbitrary administrative definitions. A village may be a small group of people living in a settlement who practise subsistence agriculture, with no specialization or division of labour, and who are isolated from national development agencies. A village may also be a large and differentiated conurbation where some people work in agriculture, some work in small-scale industries and others provide education, health care, administration and a variety of services. This guide is directed towards the larger and more differentiated village. It is also recognized that many villages do not operate independently from cities, in that cities require sustained interaction with rural communities for their food and natural resources (including land for waste disposal). Often, too, the district agencies that set policy and administer the villages are located in cities. Under these circumstances, a Healthy Villages programme has a greater chance of success if the linked city is participating in a similar type of programme for cities—a Healthy Cities Programme—and if the district-level staff implement Healthy Villages as part of the health policy for all the towns and villages in the district.

---

Acknowledgements

The preparation of this guide was coordinated by the Water, Sanitation and Health programme, Protection of the Human Environment Department, of the World Health Organization in support of the Healthy Villages Programme. Its preparation was initiated and led by Annette Prüss.

The authors gratefully acknowledge the contributions of the participants in the following two expert consultations organized by WHO’s Regional Office for the Eastern Mediterranean:

- Regional Consultation on the development of technical guidelines and integrated environmental management norms for Healthy Villages, Tabriz, Islamic Republic of Iran, June 1998
- Inter-regional Consultation on Healthy Villages, Damascus, Syria, October 1999.

The authors would also like to thank the staff from WHO Headquarters and WHO Regional Office for the Eastern Mediterranean for their comments on the content and style of the guide. In particular thanks go to Kumars Khosh-Chashm for his support.

Finally, the authors would like to acknowledge the editorial work of Kevin Farrell.
