^aSee list of Member States by WHO region and mortality stratum.^bSee explanatory notes for sources and methods.^cWorld totals for males and females include residual populations living outside WHO Member States.^dEstimates for specific causes may not sum to broader cause groupings owing to omission of residual categories.^eFor WHO Regions of the Americas, Europe and the Western Pacific, these figures include only late effects of poliomyelitis cases with onset prior to regional certification of polio eradication in 1994, 2000 and 2002, respectively. For all other regions, except where vital registration reports late effects of polio cases, these deaths are from acute poliomyelitis.^fDoes not include liver cancer and cirrhosis deaths resulting from chronic hepatitis virus infection.^gThis category includes deaths from causes originating in the perinatal period as defined in Chapter XVI of the International Classification of Diseases, principally low birthweight, prematurity, birth asphyxia and birth trauma, and does not include all deaths occurring in the early neonatal period.
