Dr Étienne V. Langlois
Scientist
Alliance for Health Policy and Systems Research

Dr Langlois is an epidemiologist specialized in health systems research, maternal and child health and evidence synthesis. He joined the Alliance in 2014 and manages portfolios of work on primary health care, implementation research and health systems strengthening, placing evidence-to-policy at the centre of its scientific activities.

Trained in medicine, global health and epidemiology/public health, Dr Langlois has conducted research projects on skilled birth attendance and postnatal care services in low- and middle-income countries (LMICs). He has worked on methods development for embedded research and health systems research synthesis and edited several WHO publications.

He previously worked as a researcher at the Global Health Unit of the University of Montreal’s Hospital Research Centre (Canada) and lecturer in clinical epidemiology and global health. He lived in Burkina Faso and worked in various LMICs, an experience that led him to be a strong advocate of evidence-informed interventions to enhance equity and universal health coverage.
