In this month’s *Bulletin*

In editorials this month, Michel Sidibé & Kent Buse (870) call for a framework convention on global health and Neshan B Llangaratne et al. (871) explain why millions of people with untreated epilepsy need access to an essential medicine. Patrick Adams (874–875) reports on the roll-out of vaccines for human papillomavirus in low-income countries. Fiona Fleck interviews Mike Daube (876–877) about forty years of campaigning for tobacco control.

---

**Containing costs**

Tom L Drake et al. (940–941) look for the information needed to judge the cost-effectiveness of measures to mitigate pandemic influenza.

**Seeing the numbers**

Manju Rani et al. (932–939) make a case for more access to health research data.

**In the field**

Elena Ghanotakis et al. (921–931) describe how countries have adapted WHO guidance for preventing mother-to-child transmission of HIV.

**Equipped to cope**

Grace Wu & Muhammad H Zaman (914–920) specify the low-cost tools needed for HIV testing and monitoring.

**Identifying malnourished children**

Martha K Mwangome et al. (887–894) use upper arm circumference to predict risk of infant deaths.

**Keeping kids out of the dirt**

Alexander van Geen et al. (878–886) examine lead contamination of soil in Peruvian mining towns.

**Making better use of antibiotics**

Nithima Sumpradit et al. (905–913) describe ways to improve prescription patterns and demand.

**Monitoring malaria**

Neelima Mishra et al. (895–904) report outcomes and risks for treatment failure.
