This month, the Bulletin’s focus is on climate change and health. In editorials, Maria Neira (546) announces the first WHO conference on the subject and Robert Yates (547) proposes that governments should reconsider fuel subsidies in the context of mitigating climate change.

Gary Humphreys (551–552) reports on how policy-makers are reframing climate change in terms of its effects on human health and Fiona Fleck interviews Marit Viktoria Pettersen (553–554), climate negotiator for Norway. In a third editorial, Tricia Petruney et al. (548) explain why family planning should be included when setting development goals.

**Men’s health should count too**
Peter Baker et al. (618–620) make the case for revising global health equity goals.

**Brazil**
**Not so fast**
Betina Durovni et al. (613–617) share lessons learnt when introducing a new test for tuberculosis.

**Argentina, Guatemala, India, Kenya, Pakistan & Zambia**
**Fatal outcomes of pregnancy**
Sarah Saleem et al. (605–612) track maternal and neonatal deaths.

**Peru**
**Is the water safe to drink?**
Christine Marie George et al. (565–572) measure arsenic concentrations in water.

**China**
**Linking growth of the economy to growth of children**
Xin-Nan Zong & Hui Li (555–564) track 35 years of economic indicators and children’s height and weight data.

**Zambia**
**Preventing vertical transmission**
Benjamin H Chi et al. (582–592) evaluate efforts to prevent mother-to-child-transmission of human immunodeficiency virus.

**Cambodia**
**Curing that cough**
Tan Eang Mao et al. (573–581) track changes in tuberculosis prevalence.

**Australia**
**Reducing hospital stays for herpes zoster**
Anita E Heywood et al. (593–604) analyse the impact of a varicella vaccination programme.
