Nick Wilson

Professor of Public Health, University of Otago, Wellington, New Zealand

Professor Nick Wilson is a Director of the Burden of Disease Epidemiology, Equity and Cost-Effectiveness Programme (BODE3) which undertakes epidemiological modelling and health economic analyses of health sector interventions.

While his current work is largely on non-communicable disease prevention, he maintains research activity on influenza and pandemics (i.e. 53 Medline-indexed publications).

Nick Wilson has also published specifically on border control around pandemics (8 publications), of which two publications relate to economic analyses around border closure in the face of severe pandemic threats. As part of work on immunisation he has worked in 10 Pacific Island Countries and Territories and so has some familiarity with how island nations approach infectious disease control issues.
