CORRIGENDA
A clinical case definition of post COVID-19 condition by a Delphi consensus, 6 October 2021
(WHO/2019-nCoV/Post_COVID-19_condition/Clinical_case_definition/2021.1)

Page 1, lines 21–28
Delete: Post COVID-19 condition occurs in individuals with a history of probable or confirmed
SARS-CoV-2 infection, usually occurring 3 months from the onset of COVID-19 with
symptoms and lasting for at least 2 months, that cannot be explained by an alternative
diagnosis. Common symptoms include fatigue, shortness of breath, cognitive dysfunction
but also others (see Table 3 and Annexes 2) which generally have an impact on everyday
functioning. Symptoms may be new onset, following initial recovery from an acute COVID-
19 episode, or persist from the initial illness. Symptoms may also fluctuate or relapse over
time. A separate definition may be applicable for children.
