Coronavirus disease (COVID-19)
Situation Report – 117
Data as received by WHO from national authorities by 10:00 CEST, 16 May 2020

Highlights

WHO has published a new scientific brief on “Multisystem inflammatory syndrome in children and adolescents with COVID-19”, given the reported clusters of children and adolescents who require admission to intensive care units with a multisystem inflammatory condition. There is an urgent need for collecting standardized data describing epidemiology, clinical presentations, severity, and outcomes.

WHO Director-General Dr Tedros, in his media briefing yesterday, highlighted the need to “unleash the full power of science, to deliver innovations that are scalable, usable, and benefit everyone, everywhere, at the same time”.

WHO has published new guidance on “Cleaning and disinfection of environmental surfaces in the context of COVID-19”, intended for healthcare professionals, public health professionals and health authorities that are developing and implementing cleaning and disinfection policies and standard operating procedures.

WHO and UNICEF have published a document on frequently asked questions (FAQs) about immunization in the context of the COVID-19 pandemic. These FAQs accompany WHO’s Guiding principles for immunization activities during the COVID-19 pandemic.

Situation in numbers (by WHO Region)
Total (new cases in last 24 hours)

Case definitions

WHO periodically updates the Global Surveillance for human infection with coronavirus disease (COVID-19) document which includes surveillance definitions.

Definition of COVID-19 death

COVID-19 death is defined for surveillance purposes as a death resulting from a clinically compatible illness in a probable or confirmed COVID-19 case, unless there is a clear alternative cause of death that cannot be related to COVID-19 disease (e.g. trauma). There should be no period of complete recovery between the illness and death.

Further guidance for certification and classification (coding) of COVID-19 as cause of death is available here.
Annex 1: Data, table and figure notes

Caution must be taken when interpreting all data presented. Differences are to be expected between information products published by WHO, national public health authorities, and other sources using different inclusion criteria and different data cut-off times. While steps are taken to ensure accuracy and reliability, all data are subject to continuous verification and change. Case detection, definitions, testing strategies, reporting practice, and lag times differ between countries/territories/areas. These factors, amongst others, influence the counts presented, with variable underestimation of true case and death counts, and variable delays to reflecting these data at global level.

The designations employed, and the presentation of these materials do not imply the expression of any opinion whatsoever on the part of WHO concerning the legal status of any country, territory or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted and dashed lines on maps represent approximate border lines for which there may not yet be full agreement. Countries, territories and areas are arranged under the administering WHO region.

[1] All references to Kosovo should be understood to be in the context of the United Nations Security Council resolution 1244 (1999). In the map, number of cases of Serbia and Kosovo (UNSCR 1244, 1999) have been aggregated for visualization purposes.

Counts reflect laboratory-confirmed cases and deaths, based on WHO case definitions, unless stated otherwise (see Country, territory, or area-specific updates and errata), and include both domestic and repatriated cases.

Other*: includes cases reported from an international conveyance (Diamond Princess).

Due to the recent trend of countries conducting data reconciliation exercises which remove large numbers of cases or deaths from their total counts, WHO will now display such data as negative numbers in the “new cases” / “new deaths” columns as appropriate. This will aid readers in identifying when such adjustments occur. When additional details become available that allow the subtractions to be suitably apportioned to previous days, graphics will be updated accordingly. Prior situation reports will not be edited; see covid19.who.int for the most up-to-date data.

Additional table notes

i Transmission classification is based on a process of country/territory/area self-reporting. Classifications are reviewed on a weekly basis, may be revised as new information becomes available, and are based on the highest category reported. Differing degrees of transmission may be present within countries/territories/areas. Categories:

- No cases: with no confirmed cases (not shown in table).
- Sporadic cases: with one or more cases, imported or locally detected.
- Clusters of cases: experiencing cases, clustered in time, geographic location and/or by common exposures.
- Community transmission: experiencing larger outbreaks of local transmission defined through an assessment of factors including, but not limited to: large numbers of cases not linkable to transmission chains; large numbers of cases from sentinel lab surveillance; and/or multiple unrelated clusters in several areas of the country/territory/area.
- Pending: transmission classification has not been reported to WHO.

ii “Territories” include territories, areas, overseas dependencies and other jurisdictions of similar status.
