ABOUT THIS GUIDE

This Manual should be read in conjunction with the Prevent TB Smart Setup & Mobile Application Manuals. The document is a complete guide for the users on how to use the PREVENT TB Dashboard. It contains step by step instructions on each of the components with illustrations for ease of understanding flows and features.

Objective of the Dashboard Module: The Prevent TB Dashboard module summarizes the data captured in the mobile application to help the program manager or admin visualize quickly the distribution of activity and trends in time, place and population.

Dashboard URL: https://ltbigen.duredemos.com/ltbi-generic-new
PREVENT TB DASHBOARD

This section gives details for instructions on how to use the PREVENT TB DASHBOARD.

LOGIN / SIGN IN

Once a program is published via the Smart Setup the demo credentials for accessing the App and Dashboard both will be displayed, which can be found in the ‘My Application’ page when clicked on ‘Demo Users’ link. Setting up the Dashboard should therefore follow the smart setup of the application.

After successful login the user will be directed to the Dashboard Overview page where the user can see the Dynamic Indicators and Charts. There is also a filter option to view data for a state or district.
The Overview page has following features or modules:

1. LTBI and TB Pathway - Indicators to show value of how many patients were Registered, Referred, Tested & Treatment Initiated or not initiated.
2. Map or Hotspot Details - To view the exact location from where the contact case was associated.
3. LTBI and TB Cascade - Representation of data in form of charts.
4. Filters on top (Select State, Select District) – To view data of a state, district.
The Analysis page will have dynamic charts of all the data variables which are already pre-defined in the smart setup and if there are any variable options added or updated then those would also display in analysis page in the form of charts.
The Alerts which can be seen in the Mobile Application by the Outreach Worker (ORW), the same alert list with details will also be visible to the Dashboard user. Alternatively, in the smart setup under ‘Configure Dashboard’ module (Alerts section) the user can select or unselect variables which will be visible on the Dashboard for better analysis.
In this step, the Dashboard user can view the list of all index cases and the contacts who were associated to those patients. The detailed Case History of the contacts can also be seen on clicking the ‘+’ icon. Please see the below illustration:

Alternatively, in the smart setup under ‘Configure Dashboard’ module (Linelist section) the user can select or unselect variables which will be visible on the Dashboard for better analysis.
