HIGHLIGHTS

• On the 5th of March 2020, the Ministry of Public Health of Thailand (MoPH) announced four new cases of COVID-19, bringing the total number of cases in Thailand to 47. These are imported cases, all males, two from Iran, and two from Italy. None of the cases are linked.

• The four new cases: 1) An Italian national, 29, a company employee, recently traveled from Italy, arrived 1 March to Thailand, walk-in to a hospital with symptoms on 2 March, he is now admitted at Chonburi Hospital; 2) a Thai national, 42, an office worker, returned from Italy on 2 March, walk-in to a hospital on 3 March with fever, he is now admitted at a private hospital in Chonburi; 3) a Chinese national, 22, a student from Iran, transiting through Bangkok on 1 March, detected by thermo-scanner at the infectious disease control point at Suvarnabhumi Airport, now admitted to Bamrasnaradura Infectious Diseases Institute; and 4) a Thai national, 20, a student from Iran, arrived to Bangkok 27 February, visited a hospital in Nakhon Si Thammarat on 2 March, with symptoms, now hospitalized.

• The total number of laboratory-confirmed COVID-19 cases reported in Thailand now stands at 47, of which 31 have recovered, 15 are in hospital and one has died. One patient remains severely unwell.

• The number of PUIs currently stands at 3,895. In total, 1,615 PUIs are under treatment/investigation; this number includes people being treated for other conditions who are no longer suspected of having COVID-19 infection.

• The MoPH announced a new, shorter list of COVID-19-affected countries or areas: China (including Hong Kong and Macao), Republic of Korea, Iran, and Italy. Possible restrictions on visitors from the listed countries have not yet been announced.

• According to the MoPH announcement, Thailand’s Prime Minister today directed Government Ministries to identify places for use as quarantine centres and described a category of “self-quarantine” for some visitors from COVID-19-affected countries to include minimizing social contact and to wear a mask if travel to crowded public areas is required. The Ministry statement further advised the public to not panic, to use common sense in confronting COVID-19, and to not shun persons who may be suspected of being infected.
### recommendations and advice for the public

The basic principles to reduce the general risk of transmission of acute respiratory infections, including by the virus causing COVID-19, include the following:

- Avoiding close contact with people suffering from acute respiratory infections.
- Frequent hand-washing, especially after direct contact with ill people or their environment.
- Avoiding unprotected contact with farm or wild animals.
- People with symptoms of acute respiratory infection should practice cough etiquette (maintain distance, cover coughs and sneezes with disposable tissues or clothing, and wash hands).
- Within healthcare facilities, enhance standard infection prevention and control practices in hospitals, especially in emergency departments.

NEW advice from WHO on the survivability of the SARS-CoV-2 virus on surfaces & cleaning practices in different settings, available [here](#).

WHO does not recommend any specific health measures for travellers. In case of symptoms suggestive of respiratory illness either during or after travel, travellers are encouraged to seek medical attention and share their travel history with their healthcare provider.

### media

- WHO Thailand continues to receive media queries about the outbreak and through its [website](#) provides relevant content on a regular basis to the public and other constituencies. Media queries can be directed to sethawebmaster@who.int and risleyp@who.int
- WHO Thailand’s [Twitter](#) and [Facebook](#) accounts post useful information on hygiene and protection, such as when and how to use masks, as well as relevant WHO technical guidelines and other content related to the novel coronavirus situation in Thailand and globally.

### who thailand strategic objectives

WHO Thailand’s strategic objectives to support Thailand’s response are to:

- Limit human-to-human transmission including reducing secondary infections among close contacts and health care workers, preventing transmission amplification events, and preventing further spread within as well as to and from Thailand;
- Identify, isolate and care for patients early, including providing optimized care for infected patients;
- Address crucial unknowns regarding clinical severity, extent of transmission and infection, treatment options, and accelerate the development of diagnostics, therapeutics and vaccines;
- Communicate critical risk and event information to all communities and counter misinformation; and
- Minimize social and economic impact through multisectoral partnerships.

### preparedness and response

What Thailand is doing

- Thailand has strong capacities for case detection, risk assessment, case investigation, laboratory diagnosis, clinical management, infection prevention and control, and risk communication.
Thailand is also updating its dedicated national pandemic influenza preparedness plan (pending approval by the Prime Minister’s Cabinet).

With WHO support, the National Institute of Health of Thailand is supporting specimen testing for other countries as requested.

The Health Ministry is conducting modelling exercises with the National Research Council of Thailand to forecast possible scenarios and outcomes as the outbreak evolves in Thailand.

Visitors to Thailand traveling from affected areas are being screened and provided information upon arrival by the Ministry of Public Health, including how to report any possible illness to the Department of Disease Control using the 1422 hotline.

The Ministry has also introduced a self-reporting online tool, available in Thai, English and Chinese, which can be accessed here.

What WHO is doing in Thailand

WHO Thailand remains in regular and direct contact with the Royal Thai Government through the Ministry of Public Health, sharing information with the Government including key developments elsewhere, as well as guidelines and updates;

WHO supports the wider UN response and provides relevant information and advice to staff of the UN system in Thailand;

---

1 This can be achieved through a combination of public health measures, such as rapid identification, diagnosis and management of the cases, identification and follow up of the contacts, infection prevention and control in healthcare settings, implementation of health measures for travellers, awareness-raising in the population and risk communication.
