The World Health Organization Country Office in Yemen generated the vulnerability matrix to identify districts with higher vulnerabilities in terms of hazards, hazard impact to exposed populations, health systems capacities, morbidity of selected communicable diseases and other conditions, WASH, nutrition, food security key cluster indicators, social determinants and health outcomes in order to prioritise health and non-health interventions.

The number of districts with higher vulnerabilities increased in 2018, putting a tremendous challenge to the humanitarian response of the Health Cluster to cover larger geographical areas and higher number of beneficiaries.

And with the continued fighting in some districts in Al Hudaydah, the number of districts deemed extremely and highly vulnerable will likely increase as well as people in need of humanitarian assistance.

**HEALTH OBJECTIVES**

1. Increase access of vulnerable populations including IDPs to Minimum Health Service Package through support to health system and community resilience.
2. Strengthen preparedness, surveillance and response to communicable diseases outbreaks and epidemics, including immunization for vaccine preventable diseases.
3. Improve access to reproductive, maternal, newborn, child and adolescent health services for vulnerable populations, including IDPs and the poorest and deprived segments in the society.
4. Deliver a principled and coordinated health response and promote an integrated approach with other sectors for a comprehensive response focused on the most vulnerable districts.

**KEY FIGURES**

- 16.4 M in need of assistance to access essential healthcare
- 12.3 M targeted by providing primary, secondary health care and referral services through Minimum Health Service Package
- 8.1 M beneficiaries reached
- 71 Health Cluster partners
- USD 572 M funding requirement, 42% funded

**Humanitarian response monitoring indicators (January to June 2018)**

- **6.3 M Total OPD Consultations**
  - Jan: 122K
  - Feb: 121K
  - Mar: 237K
  - Apr: 133K
  - May: 239K
  - Jun: 124K

- **2.4 M IDP consultations**
  - Jan: 55K
  - Feb: 158K
  - Mar: 442K
  - Apr: 370K
  - May: 293K
  - Jun: 155K

- **1.2 M Communicable disease consultations**
  - Jan: 56K
  - Feb: 156K
  - Mar: 442K
  - Apr: 370K
  - May: 293K
  - Jun: 155K

- **27 K Consultations for new hypertensives**
  - Jan: 5K
  - Feb: 4K
  - Mar: 1K
  - Apr: 6K
  - May: 5K
  - Jun: 1K
Yemen: Health Cluster Snapshot (January to June 2018)

- **712 K Inpatient admissions** (hospital admissions, surgeries, trauma case management, deliveries and SAM w/ complications admissions)
- **155 K Hospital admissions**
- **294 K Surgeries**
- **17 K Trauma case management**
- **90 K Normal deliveries, 20 K Caesarean sections**
- **136 K SAM (with complications) admissions**
- **1.1 M ANC, PNC and Penta 3 vaccination**
