MOHAMMED O.M.SIMBA
Focal person PV - Zanzibar
PV Activities in Zanzibar

- There is a Pharmacovigilance center which operates under ZFDB
- Several HWs have been trained
- Guidelines for PV were developed
- Tool for data collection forms (ADR report) were developed
- Introduce PV boxes in all hospital departments include HIV/AIDs
- We have add PV in c/o student curriculum.
Data Management

- Patient report forms whenever available are regularly collected and submitted to PV Center
- EPI INFO is used for data entry and analysis
- Currently we have enrolled for access to VigiFlow, we do not have much experience on it
PV in public health programme/HIV treatment programme

- We do not have special programme for Antiretroviral but all patient are monitored.
- Two staff were trained for Pharmacovigilance in a HIV/AIDS department.
ARVs most used in HIV national center

- Zidovudine + Lamivudine + Efavirenz
- Stavudine + Lamivudine + Efavirenz
- Abacavir + Didanosine + Lopenavir
- Tenofovir + Emitricitabine + Lopenavir

3699 patients are attending CTCs, 1794 are on ARVs, 24 are on second line ARVs.
ARV – ADR reports

☐ Fewer have been reported
PV activities in ARV

There is no special or strategies for PV activities in HIV/AIDs.
Way forward

- There is need for HIV/AIDs programme to have special budgeted Pharmacovigilance Activities like Malaria Control programme.
Report all ADRs as soon as possible
