Global Vaccination Summit: European Commission and WHO join forces to promote the benefits of vaccines

Hayatee Hasan, WHO Headquarters

On 12 September, the European Commission and the World Health Organization (WHO) co-hosted the world’s first Global Vaccination Summit in Brussels. The Summit aims to accelerate global action to stop the spread of vaccine-preventable diseases, and advocate against the spread of vaccine misinformation worldwide. Opening the summit, European Commission President Jean-Claude Juncker and WHO Director-General Dr Tedros called for an urgent intensification of efforts to stop the spread of vaccine-preventable diseases such as measles. In the past three years, seven countries, including four in the European region, have lost their measles elimination status. Special addresses and video messages were made by:

- Yvonne Chaka Chaka (South African singer, champion for the Global Fund to Fight AIDS, TB and Malaria, and the United Nations MDG Envoy for Africa)
- Fergal Brennan, brother of Laura Brennan, Irish HPV vaccine advocate who died of cervical cancer in March 2019
- Ethan Lindenberger, American teenager known for his opposition to anti-vaccine disinformation campaigns

New outbreaks are the direct result of gaps in vaccination coverage, including amongst teenagers and adults who were never fully vaccinated. To tackle vaccination gaps effectively, the summit addressed the multiple barriers to vaccination, including rights, regulations and accessibility, availability, quality and convenience of vaccination services; social and cultural norms, values and support; and individual motivation, attitudes, and knowledge and skills.

The European Commission and WHO also urged for strong support of GAVI, the Vaccine Alliance. New models and opportunities for stepping up vaccine development were also on the Global Vaccination Summit agenda, as well as ways to ensure that immunization is a public health priority and a universal right.

Dr Tedros said: “After many years of progress, we are at a critical turning point. Measles is resurgent, and 1 in 10 children continues to miss out on essential childhood vaccines. We can and must get back on track. We will only do this by ensuring everyone can benefit from the power of vaccines – and if governments and partners invest in immunization as a right for all, and a social good. Now is the time to step up efforts to support vaccination as a core part of Health for All.”

Vaccine misinformation: Statement by WHO Director-General on Facebook and Instagram
Hayatee Hasan, WHO Headquarters

WHO welcomes the commitment by Facebook to ensure that users find facts about vaccines across Instagram, Facebook Search, Groups, Pages and forums where people seek out information and advice. Facebook will direct millions of its users to WHO’s accurate and reliable vaccine information in several languages, to ensure that vital health messages reach people who need them the most.

WHO and Facebook have been in discussions for several months to ensure people can access authoritative information on vaccines and reduce the spread of inaccuracies.

Vaccine misinformation is a major threat to global health that could reverse decades of progress made in tackling preventable diseases.

Many debilitating and deadly diseases can be effectively prevented by vaccines. Think measles, diphtheria, hepatitis, polio, cholera, yellow fever, influenza… We want digital actors doing more to make it known around the world that #VaccinesWork.

Malaria vaccine launched in Kenya: Kenya joins Ghana and Malawi to roll out landmark vaccine in pilot introduction
Hayatee Hasan and Kristen Kelleher, WHO Headquarters

WHO congratulates the Government of Kenya for launching the world’s first malaria vaccine on 13 September 2019 in Homa Bay County, western Kenya. The malaria vaccine pilot programme is now fully under way in Africa, as Kenya joins Ghana and Malawi to introduce the landmark vaccine as a tool against a disease that continues to affect millions of children in Africa.

The vaccine, known as RTS,S, will be available to children from six months of age in selected areas of the country in a phased pilot introduction. It is the first and only vaccine to significantly reduce malaria in children.

Malaria claims the life of one child every two minutes. The disease is a leading killer of children younger than five years in Kenya.

“Africa has witnessed a recent surge in the number of malaria cases and deaths. This threatens the gains in the fight against malaria made in the past two decades,” said Dr Matshidiso Moeti, WHO Regional Director for Africa. “The ongoing pilots will provide the key information and data to inform a WHO policy on the broader use of the vaccine in sub-Saharan Africa. If introduced widely, the vaccine has the potential to save tens of thousands of lives.”

Speaking at the event, WHO Representative to Kenya Dr Rudi Eggers said: “Vaccines are powerful tools that effectively reach and better protect the health of children who may not have immediate access to the doctors, nurses and health facilities they need to save them when severe illness comes. This is a day to celebrate as we begin to learn more about what this vaccine can do to change the trajectory of malaria through childhood vaccination.”

Health officials and advocates, national and local leaders, malaria and immunization specialists, global and in-country partners, mothers and children, and hundreds of community members celebrated the start of the phased introduction of the vaccine. Thirty years in the making, the vaccine is a complementary malaria control tool — to be added to the core package of WHO-recommended measures for malaria prevention, including the routine use of insecticide-treated bed nets, indoor spraying with insecticides and timely access to malaria testing and treatment.

The malaria vaccine pilot is a country-led, WHO-coordinated initiative. WHO partners PATH and GSK, with funders Gavi, the Vaccine Alliance, the Global Fund to Fight AIDS, Tuberculosis and Malaria, and Unitaid made this day a reality.

Immunization saves thousands of lives in the camps of forcibly displaced Myanmar nationals, Cox Bazar (Bangladesh)
Catalin Bercaru and Rajendra Bohara, WHO Country Office, Bangladesh

During a visit to Camp 14 Hakimpara in Ukhia subdistrict, Bangladesh, WHO Staff met forcibly displaced Myanmar families that had suffered huge losses, including death, due to civil unrest in their home country. Rajuma Khatun, 28 years old, lost her husband in the conflict of August 2017 that triggered the largest and fastest refugee influx from Myanmar into Cox’s Bazar district, Bangladesh. However, Rajuma who has four children aged three, five, eight and 11 years, showed us the vaccination cards of her children demonstrating that all of them had received vaccinations since their arrival in the refugee camp.

Beginning in September 2017, multiple life-saving vaccination campaigns have been conducted in Cox’s Bazar against Measles, Rubella, Polio, Cholera, Diphtheria, Tetanus, Whooping Cough, Haemophilus influenzae type b and Pneumonia. Over 4.2 million doses of the various vaccines have been delivered to date to prevent outbreaks of infectious diseases, with significant and measurable impact for more than a million people with little or no vaccination history. The political commitment and timeliness, together with national and international community involvement, were pivotal in making such massive and complicated interventions possible. Innovation and the variety of operational approaches used were instrumental in the campaigns being carried out successfully.

Rajuma and her entire community have benefited from immunization not only as one of the most effective interventions for child survival, but also through the opportunities it has provided for the delivery of integrated services, including the distribution of vitamin A supplements and implementation of growth monitoring tools, vital for the wellbeing of these children.

Under the leadership of the Government of Bangladesh (GoB) and with extensive support from Gavi, the Vaccine Alliance, WHO and UNICEF, routine immunization is now well established in the 34 camps of Cox’s Bazar. Through the ongoing immunization services delivered through over 65 outreach and 35 fixed sites, the one million refugees and their host communities are now better protected from outbreaks like diphtheria, measles and against the potential threat of cholera and other childhood diseases.

WHO South-East Asia Regional Committee delegates urged to accelerate efforts to eliminate cervical cancer
Hayatee Hasan, WHO Headquarters

WHO urges countries in its South-East Asia Region to accelerate efforts to eliminate cervical cancer by 2030.
“Countries need to expand vaccination, screening, detection and treatment services for everyone, everywhere to address the growing problem of cervical cancer,” said Dr Poonam Khetrapal Singh, Regional Director WHO South-East Asia, at the Seventy Second Session of WHO Regional Committee here in Delhi.

Cervical cancer is a significant public health problem in the Region. In 2018, an estimated 158 000 new cases and 95 766 deaths were reported due to cervical cancer, which is the third most common type of cancer.

Addressing cancer risk factors and reducing its prevalence has been a regional flagship priority since 2014. All countries in the Region are taking measures for screening and treatment of pre-cancers. Four countries in the Region - Bhutan, Maldives, Sri Lanka and Thailand - have introduced HPV vaccine nationally.

“We need to scale up both our capacities and quality for screening, treatment services and palliative care,” the Regional Director said.

National Forum on Immunization and Polio Eradication in the Democratic Republic of Congo

Cassie Kobrin, PATH

Location: Kinshasa, Democratic Republic of the Congo

Date: 22-23 July 2019

Purpose: Top leaders in the Congolese government—including DRC President Félix-Antoine Tshisekedi Tshilombo, the President of the National Assembly, the Prime Minister, and leaders of all 26 provinces, to declare a shared vision around strengthening immunization systems and polio eradication in the DRC.

Details: The forum culminated in a tremendous display of commitment when the country’s new government signed on to the Kinshasa Declaration on Immunization and Polio Eradication. Governors, Presidents of Provincial Assemblies, Ministers of Health and Heads of the Provincial Health Divisions from each of DRC’s 26 Provincial Assemblies signed onto specific actions which will provide oversight, accountability, and resources to improve immunization systems in each of their respective provinces.

Also in attendance were civil society leaders and high-level representatives from the global immunization community, including: Dr Seth Berkley, CEO of Gavi; Dr Chris Elias, President of the Bill & Melinda Gates Foundation Global Development Division; Dr Matshidiso Moeti, WHO Regional Director for Africa; Gilles Fagninou, Deputy Regional Director of the UNICEF Regional Office for West and Central Africa; Michael McGovern, Chair of the Rotary International Polio Plus Committee; Dr Muhammad Pate, Director of Health and Social Services for the World Bank Group; and Paul Sabatine, USAID DRC Mission Director.

The day after President Tshisekedi spoke at the forum, the Ministry of Finance announced a commitment of US$3M in Gavi co-financing for the purchase of new vaccines—an additional show of DRC government’s bold and ongoing commitment to immunization. PATH was pleased to support the DRC government in planning this important forum.

Niger: official establishment of the Technical Advisory Group on Immunization (NITAG-Niger) and orientation workshop on methodology for developing recommendation notes

El Khalef Ishagh, Aichatou Gbaguidi, Nomo Emmanuel, Batoure Oumarou, Haladou Moussa, Tombokoye Harouna, Mokhtar Abdoul Hakim, Anya Blanche, WHO Country Office, Niger

Location: Niamey, Niger
Date: 9-14 September 2019
Participants: Partners including WHO, UNICEF, Gavi, civil society organizations, distinguished guests of the scientific community and several Ministry of Public Health officials.

Purpose: To brief NITAG members on their role, the methodology for developing recommendation notes to the Ministry of Health based on the evidence, using the tools and the operating mode of the consultative group.

Details: NITAG Niger established by a Ministerial Decree of 28 November 2018, is a multidisciplinary consultative body called GTCV-Niger whose members were appointed by decree. The NITAG-Niger is composed of 15 multidisciplinary experts, ex-officio members from the various departments of the Ministry of Public Health and partners. The Executive Board of the NITAG is composed of a Chair, a Vice-Chair and two Secretaries.

The NITAG-Niger will thus use the knowledge gained to advise the Ministry of Health on appropriate decisions related to the national vaccination programme.

At the end of this workshop, an annual work plan of the NITAG-Niger relating to the activities to be implemented during the 4th quarter of 2019 and the year 2020 was developed as well as NITAG Niger Standard Operational Procedures.

NITAG Niger intends to start working immediately making maximum use of the NITAG Resources Center (NRC) while also sharing its activities. It also intends to be an active member of the Global NITAG Network (GNN).
Workshop on analysis of data from electronic immunizations registries

Ignacio Castro, Marcela Contreras, Robin Mowson and Martha Velandia, PAHO.

Location: Washington DC, United States.

Date: 10-11 September 2019

Participants: 22 participants attended the workshop representing four countries of the Americas Region (Argentina, Chile, Colombia and Uruguay), two countries from other WHO regions (Spain and Vietnam), CDC, UNICEF, PATH, GAVI, AIRA, Bill and Melinda Gates Foundation, independent consultants and PAHO.

Purpose:

• Share best practices regarding the design and estimation of indicators to evaluate the performance of immunization programmes, in countries or sub-national areas that have an Electronic Immunization Registry (EIR) or are in the process of implementing one.

• Continue the preparation of a methodological guide for the estimation of indicators with data obtained from EIRs.

Details: Nine countries in the Americas Region have an Electronic Immunization Registry (EIR) and another eight have made at least 50% progress towards implementing an EIR. This workshop was a continuation of the work done by PAHO regarding the quality and analysis of data from EIRs held in September 2018, in Mexico City, Mexico.

Different sessions were held where representatives of the countries, organizations and external consultants presented their experiences in the construction of indicators with data from EIRs in the following four main areas: 1) traditional indicators of immunization programme evaluation; 2) indicators for use during the implementation stage and use of the systems; 3) data quality indicators; and 4) innovative indicators. During each session, discussion, joint construction and questions were allowed by all participants.

The main conclusions of the workshop were the importance of having standardized indicators for use by countries at different stages of the EIR life cycle, such as: implementation; use of the system; monitoring of programme performance; decision-making processes; and data quality as a tracer. The reports and indicators should be oriented to the different levels of responsibility, in addition to promoting the generation of evidence from the countries that have made progress in the implementation and use of Electronic Immunization Registries.
VacunateRD, the Immunization Programme in the Dominican Republic taking a step towards innovation in social communication

Zacarias Garib, Ministry of Public Health, Dominican Republic, Patricia Grullon, Leonela Medina, Yenny Rocio Neira, Elaine Suriel, PAHO

Location: Santo Domingo, Dominican Republic
Date: 16 September 2019
Participants: Zacarias Garib, Director of the Expanded Immunization Programme, Ministry of Public Health, Patricia Grullon, Focal Point Surveillance Immunization Programme, Dr Yenny Rocio Neira, Immunization Adviser, Elaine Suriel, Consultant PAHO.

Purpose: To show and discuss the initiative and advances related to the digital marketing strategy for the immunization programme in the Dominican Republic.

Details: Social media platforms are vital to reaching a wide segment of the population and as such are an essential component of the communication strategy for any immunization programme. In light of this, the Expanded Programme on Immunization (EPI) of the Dominican Republic, with the support of the Pan American Health Organization/World Health Organization (PAHO / WHO), has integrated the use of social media into its education and communication strategies.

Under the @VacunateRD user on Instagram and Facebook, a direct communication channel has been established with the community. Through these platforms, users’ questions are answered, timely assistance is provided by referring people to Vaccination Posts around their area and key messages are provided on the routine vaccination programme and associated events, as was the case for the last Vaccination Week in the Americas (SVA).

This project has been very well received. Within the framework of the SVA 2019, one message about the launch of the campaign had the following impact on Instagram: 110,324 people reached, 204,546 views, 29,460 people watched the full video, 644 people became followers, and 4,681 people interacted with the publication. While on Facebook, the same message reached 154,834 people, had 43,292 video views and 4,077 interactions.

In addition, another message about the campaign was published which reached 53,311 people, had 76,643 views and 852 interactions on Instagram. And on Facebook, 46,216 people were reached, 583,589 video views and 561 clicks on the advertising link.

The Dominican Republic will continue with this strategy through the production of innovative and attractive content in order to effectively inform the population about the importance of vaccination at the appropriate ages, and to promote the quality of vaccines offered in Vaccination Sites from the Ministry of Public Health. With this digital component, the aim is to reach as many people as possible without leaving anyone behind!
New report provides a policy framework to support countries in implementing an effective life-course approach to immunization
International Federation of Pharmaceutical Manufacturers and Associations (IFPMA)

The report “Implementing a Life-Course Approach to Immunization” provides a policy framework for countries to implement effective policies in order to maximize individual and population-wide health and economic benefits.

Designed for policy makers and healthcare professionals, the report draws on research from six countries, Australia, Brazil, France, Japan, the United Kingdom and the United States of America, and their experience in controlling vaccine-preventable diseases by implementing a life-course approach to immunization. Successful and innovative approaches are being implemented with lessons that may inform immunization policies and programmes in other contexts.

The report was compiled by Health Policy Partnership (HPP) on the basis of desk research and expert interviews with funding from the International Federation of Pharmaceutical Manufacturers and Associations (IFPMA).

A Need for Regulatory Convergence to Accelerate Development of Much Needed Vaccines
International Federation of Pharmaceutical Manufacturers and Associations (IFPMA)

The report “Complex Journey of a Vaccine: The Steps behind Developing a New Vaccine” highlights three major factors that contribute to the lengthy development process of a novel vaccine, and highlights the challenges that manufacturers face when submitting Clinical Trial Applications (CTA).

The existence of divergent regulatory requirements across the world and the lack of a global standard significantly slows down the manufacturers’ ability to timely deliver products which have the potential to protect people from devastating infectious diseases where no other prevention or treatment options exist. As vaccines are typically targeting healthy people, it is paramount to rigorously test the safety, efficacy and quality of vaccines. To accelerate this process, there is a need to inject a dose of efficiency and predictability into the regulatory processes.

The Complex Journey of a Vaccine: The Steps Behind Developing a New Vaccine provides eight key recommendations on what can be done to accelerate innovative vaccine development. Convergence towards common global standards for Clinical Trial Applications requirements, reliance and ultimately, mutual recognition of CTA approvals, will enable a robust and timely development of much needed vaccines.

This report is the third IFPMA publication in The Complex Journey of a Vaccine series: Part I The Manufacturing Chain, Regulatory Requirements and Vaccine Availability, and Part II Immunization Supply Chain, Delivery Innovation, and Regulatory Requirements.
## Calendar

### 2019

**October**

- **8-10** Strategic Advisory Group of Experts (SAGE) on Immunization  
  - Geneva, Switzerland
- **15-16** Vaccine Safety Net workshop  
  - Geneva, Switzerland
- **15-17** EPI Managers’ meeting for Central African countries  
  - Bujumbura, Burundi
- **21-23** 20th DCVMN Annual General Meeting  
  - Rio de Janeiro, Brazil
- **24-25** Gavi Programme and Policy Committee (PPC)  
  - Geneva, Switzerland
- **28 Oct-8 Nov** Gavi Independent Review Committee (IRC)  
  - Geneva, Switzerland
- **29-30** 19th Meeting of the European Technical Advisory Group of Experts on Immunization (ETAGE)  
  - Copenhagen, Denmark
- **30** 20th World Vaccine Congress  
  - Barcelona, Spain

**November**

- **12-14** Africa Regional Immunization Technical Advisory Group (RITAG) meeting  
  - Brazzaville, Republic of the Congo
- **18-22** Global Rotavirus and Pediatric Diarrhea Surveillance meeting  
  - Rio de Janeiro, Brazil
- **19-23** American Society of Tropical Medicine and Hygiene (ASTMH) 68th Annual Meeting  
  - Washington DC, USA
- **24-26** Global consultation on Implementing School Entry Checks for Vaccination Status  
  - Kuala Lumpur, Malaysia

**December**

- **2-3** Global Vaccine Safety Summit: updating the blueprint and celebrating 20 years of GACVS  
  - Geneva, Switzerland
- **4-5** Global Advisory Committee on Vaccine Safety  
  - Geneva, Switzerland
- **4-5** Gavi Board Meeting  
  - New Delhi, India

### 2020

**February**

- **11-13** SEARO & WPRO Regional Working Group meeting  
  - Siam Reap, Cambodia
- **24-25** Global NITAG Network Meeting  
  - Atlanta, USA

**March**

- **10-12** Global Vaccine and Immunization Research Forum (GVIRF)  
  - Seoul, Korea
- **31 Mar-2 Apr** Strategic Advisory Group of Experts (SAGE) on Immunization  
  - Geneva, Switzerland

**June**

- **3-4** Global Advisory Committee on Vaccine Safety  
  - Geneva, Switzerland
**Links**
