BACKGROUND NOTE: Each year WHO and UNICEF jointly review reports submitted by Member States regarding national immunization coverage, finalized survey reports as well as data from the published and grey literature. Based on these data, with due consideration to potential biases and the views of local experts, WHO and UNICEF attempt to distinguish between situations where the available empirical data accurately reflect immunization system performance and those where the data are likely to be compromised and present a misleading view of immunization coverage while jointly estimating the most likely coverage levels for each country.

WHO and UNICEF estimates are country-specific; that is to say, each country’s data are reviewed individually, and data are not borrowed from other countries in the absence of data. Estimates are not based on ad hoc adjustments to reported data; in some instances empirical data are available from a single source, usually the nationally reported coverage data. In cases where no data are available for a given country/vaccine/year combination, data are considered from earlier and later years and interpolated to estimate coverage for the missing year(s). In cases where data sources are mixed and show large variation, an attempt is made to identify the most likely estimate with consideration of the possible biases in available data. For methods see:

*Brown et al. 2013. An introduction to the grade of confidence used to characterize uncertainty around immunization coverage and processes.

OFFICIAL SOURCES. OFFICIAL coverage: Reported by national authorities that reflects their administrative coverage:

- The WHO and UNICEF estimates of national immunization coverage.

SURVEY coverage: Based on estimated coverage from population-based household surveys among children aged 12-23 months or 24-35 months following a review of survey methods and results. Information is based on the combination of vaccination history from documented evidence or caregiver recall. Survey results are considered for the appropriate birth cohort based on the period of data collection.

ADMINISTRATIVE coverage: Reported by national authorities and based on aggregated administrative reports from health service providers on the number of vaccinations administered during a given period (numerator data) and reported target population data (denominator data). May be biased by inaccurate numerator and/or denominator data.

SURVEY coverage may differ across countries.

DATA SOURCES.

ABBREVIATIONS

**BCG:** percentage of births who received one dose of Bacillus Calmette Guerin vaccine.

**DTP1 / DTP3:** percentage of surviving infants who received the 1st / 3rd dose, respectively, of diphtheria and tetanus toxoid with pertussis containing vaccine.

**Pol3:** percentage of surviving infants who received the 3rd dose of polio containing vaccine. May be either oral or inactivated polio vaccine.

**IPV1:** percentage of surviving infants who received at least one dose of inactivated polio vaccine. In countries utilizing an immunization schedule recommending either (i) a primary series of three doses of oral polio vaccine (OPV) plus at least one dose of IPV where OPV is included in routine immunization and/or campaign or (ii) a sequential schedule of IPV followed by OPV, WHO and UNICEF estimates for IPV1 reflect coverage with at least one routine dose of IPV among infants <1 year of age among countries. For countries utilizing IPV containing vaccine use only, i.e., no recommended dose of OPV, the WHO and UNICEF estimate for IPV1 corresponds to coverage for the 1st dose of IPV.

Production of IPV coverage estimates, which begins in 2015, results in no change of the estimated coverage levels for the 3rd dose of polio (Pol3). For countries recommending routine immunization with a primary series of three doses of IPV alone, WHO and UNICEF estimated Pol3 coverage is equivalent to estimated coverage with three doses of IPV. For countries with a sequential schedule, estimated Pol3 coverage is based on that for the 3rd dose of polio vaccine regardless of vaccine type.

**MCV1:** percentage of surviving infants who received the 1st dose of measles containing vaccine. In countries where the national schedule recommends the 1st dose of MCV at 12 months or later based on the epidemiology of disease in the country, coverage estimates reflect the percentage of children who received the 1st dose of MCV as recommended.

**MCV2:** percentage of children who received the 2nd dose of measles containing vaccine according to the nationally recommended schedule.

**RCV1:** percentage of surviving infants who received the 1st dose of rubella containing vaccine. Coverage estimates are based on WHO and UNICEF estimates of coverage for the dose of measles containing vaccine that corresponds to the first measles-rubella combination vaccine. Nationally reported coverage of RCV is not taken into consideration nor are the data represented in the accompanying graph and data table.

**HepBB:** percentage of births which received a dose of hepatitis B vaccine within 24 hours of delivery. Estimates of hepatitis B birth dose coverage are produced only for countries with a universal birth dose policy. Estimates are not produced for countries that recommend a birth dose to infants born to HepB virus-infected mothers only or where there is insufficient information to determine whether vaccination is within 24 hours of birth.

**HepB3:** percentage of surviving infants who received the 3rd dose of hepatitis B containing vaccine following the birth dose.

**Hib3:** percentage of surviving infants who received the 3rd dose of Haemophilus influenzae type b containing vaccine.

**RotaC:** percentage of surviving infants who received the final recommended dose of rotavirus vaccine, which can be either the 2nd or the 3rd dose depending on the vaccine.

**PeV3:** percentage of surviving infants who received the 3rd dose of pneumococcal conjugate vaccine. In countries where the national schedule recommends two doses during infancy and a booster dose at 12 months or later based on the epidemiology of disease in the country, coverage estimates may reflect the percentage of surviving infants who received two doses of PeV3 prior to the 1st birthday.

**YFV:** percentage of surviving infants who received one dose of yellow fever vaccine in countries where YFV is part of the national immunization schedule for children or is recommended in at risk areas; coverage estimates are annualized for the entire cohort of surviving infants.

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2017 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.
- Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.
- There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

Three symbols are used to indicate the strength of the support for the estimates:

- **•••** Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2017 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.
- **••** Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.
- **•** There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

---

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

### Description:

Estimates for a dose of inactivated polio vaccine (IPV) begin in 2015 following the Global Polio Eradication Initiative’s Polio Eradication and Endgame Strategic Plan: 2013-2018 which recommended at least one full dose or two fractional doses of IPV into routine immunization schedules as a strategy to mitigate the potential consequences should any re-emergence of type 2 poliovirus occur following the planned withdrawal of Sabin type 2 strains from oral polio vaccine (OPV).

2018: Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. No nationally representative household survey within the last 5 years. WHO and UNICEF recommend a high-quality survey to confirm reported levels of coverage. Programme recovered from 2017 stock-out. GoC=R+ D+

2017: Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. IPV stock-outs due to global vaccine shortages. Remaining IPV vaccine from 2016 used in 2017. GoC=R+ D+

2016: Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. Estimate based on reported data following introduction. Estimate challenged by: D-

2015: Estimate based on reported administrative estimate. National reported estimates include estimated number of immunizations provided in the private sector. Inactivated polio vaccine in June 2015. Estimate is based on reported administrative coverage. GoC=R+ D+

2014: Estimate based on estimated MCV1. National reported estimates include estimated number of immunizations provided in the private sector. Rubella containing vaccine reintroduced in combination with the first dose of MCV during 2014. GoC=R+ D+

2007: First dose of rubella vaccine given with second dose of measles containing vaccine. Estimate based on MCV2 estimate National reported estimates include estimated number of immunizations provided in the private sector. Routine administration of rubella containing vaccine was discontinued along with the second dose of measles in 2007. GoC=R+ D+
Estimate GoC

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2017 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.

Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.

There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

Description:

2018: Programme reports 60 percent coverage achieved in 61 percent of the national target population, based on births from the public sector. Estimate is based on annualized coverage achieved in the national target population and reflects doses delivered within 24 hours of delivery. National reported estimates include estimated number of immunizations provided in the private sector. No nationally representative household survey within the last 5 years. WHO and UNICEF recommend a high-quality survey to confirm reported levels of coverage. Estimate challenged by: R-

2017: Programme reports 53 percent coverage achieved in 61 percent of the national target population, based on births from the public sector. Estimate is based on annualized coverage achieved in the national target population and reflects doses delivered within 24 hours of delivery. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2016: Estimate of 22 percent assigned by working group. Estimate is based on reported data. Coverage reflects doses delivered within 24 hours of delivery. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2015: Estimate of 14 percent assigned by working group. Estimate based on reported administrative coverage data. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2014: Reported data calibrated to 2013 and 2015 levels. National reported estimates include estimated number of immunizations provided in the private sector. Reported administrative coverage level reflects HepB coverage within 24 hours. Reported official government estimate includes HepB coverage beyond 24 hours. Estimated coverage reflects doses administered within 24 hours. Estimate challenged by: R-

2013: Estimate of 14 percent assigned by working group. Reported coverage level reflects HepB coverage within 24 hours and beyond. Estimated coverage reflects doses administered within 24 hours. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2012: Estimate of 9 percent assigned by working group. Reported coverage level reflects HepB coverage within 24 hours and beyond. Estimated coverage reflects doses administered within 24 hours. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2011: Estimate of 4 percent assigned by working group. Reported coverage level reflects HepB coverage within 24 hours and beyond. Estimated coverage reflects doses administered within 24 hours. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2010: Estimate of 20 percent assigned by working group. Reported coverage level reflects HepB coverage within 24 hours and beyond. Estimated coverage reflects doses administered within 24 hours. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: D-R-
### Morocco - HepB3

**Description:**

- **2018:** Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. No nationally representative household survey within the last 5 years. WHO and UNICEF recommend a high-quality survey to confirm reported levels of coverage. GoC=R+ D+
- **2017:** Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2016:** Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2015:** Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2014:** Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2013:** Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2012:** Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2011:** Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2010:** Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2009:** Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2008:** Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2007:** Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+

The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- **Estimate is supported by reported data** [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2017 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.
- **Estimate is supported by at least one data source**; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.
- **There are no directly supporting data**; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

WHO and UNICEF estimates of national immunization coverage - next revision available July 15, 2020

Data received as of June 28, 2019
The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

*** Estimate is supported by reported data [R+] , coverage recalculated with an independent denominator from the World Population Prospects: 2017 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.

** Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.

* There are no directly supporting data; or data from at least one source; [R-], [D-], [S-], challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

Description:

2018: Reported data calibrated to 2011 levels. National reported estimates include estimated number of immunizations provided in the private sector. No nationally representative household survey within the last 5 years. WHO and UNICEF recommend a high-quality survey to confirm reported levels of coverage. Estimate challenged by: R-

2017: Reported data calibrated to 2011 levels. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2016: Reported data calibrated to 2011 levels. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2015: Reported data calibrated to 2011 levels. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2014: Reported data calibrated to 2011 levels. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2013: Reported data calibrated to 2011 levels. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2012: Reported data calibrated to 2011 levels. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2011: Estimate of 99 percent assigned by working group. Estimate set to DTP3 level. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2010: Reported data calibrated to 2011 levels. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2009: Reported data calibrated to 2011 levels. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2008: Reported data calibrated to 2011 levels. National reported estimates include estimated number of immunizations provided in the private sector. Estimate challenged by: R-

2007: Reported data calibrated to 2011 levels. National reported estimates include estimated number of immunizations provided in the private sector. Hib vaccine introduced in 2007. Vaccine presentation is DTP-Hib. Estimate challenged by: D-R-
The WHO and UNICEF estimates of national immunization coverage (vuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- Estimate is supported by reported data [R+], coverage recalculated with an independent denominator from the World Population Prospects: 2017 revision from the UN Population Division (D+), and at least one supporting survey within 2 years [S+]. While well supported, the estimate still carries a risk of being wrong.
- Estimate is supported by at least one data source; [R+], [S+], or [D+]; and no data source, [R-], [D-], or [S-], challenges the estimate.
- There are no directly supporting data; or data from at least one source; [R-], [D-], [S-]; challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.

### Description:

- **2018**: Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. No nationally representative household survey within the last 5 years. WHO and UNICEF recommend a high-quality survey to confirm reported levels of coverage. GoC=R+ D+
- **2017**: Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2016**: Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2015**: Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2014**: Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2013**: Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2012**: Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2011**: Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. GoC=R+ D+
- **2010**: Estimate based on coverage reported by national government. National reported estimates include estimated number of immunizations provided in the private sector. Rotavirus vaccine introduced in 2010. GoC=R+
The WHO and UNICEF estimates of national immunization coverage (wuenic) are based on data and information that are of varying, and, in some instances, unknown quality. Beginning with the 2011 revision we describe the grade of confidence (GoC) we have in these estimates. As there is no underlying probability model upon which the estimates are based, we are unable to present classical measures of uncertainty, e.g., confidence intervals. Moreover, we have chosen not to make subjective estimates of plausibility/certainty ranges around the coverage. The GoC reflects the degree of empirical support upon which the estimates are based. It is not a judgment of the quality of data reported by national authorities.

- Estimate is supported by reported data \([R+]\), coverage recalculated with an independent denominator from the World Population Prospects: 2017 revision from the UN Population Division \([D+]\), and at least one supporting survey within 2 years \([S+]\). While well supported, the estimate still carries a risk of being wrong.
- Estimate is supported by at least one data source; \([R+], [S+], [D+]\); and no data source, \([R-], [D-], [S-]\), challenges the estimate.
- There are no directly supporting data; or data from at least one source; \([R-], [D-], [S-]\) challenge the estimate.

In all cases these estimates should be used with caution and should be assessed in light of the objective for which they are being used.
