Department of Public Health and Environment
World Health Organization
20, av. Appia; CH-1211 Geneva 27
Switzerland

Current Activities
The Network is initially focussing on activities in four thematic areas:

- Capacity building and training
- Chemical risk assessments/sharing knowledge
- Risk assessment methodology
- Identification and communication of research priorities

Activities underway include:

- Development of an online database of risk assessment training courses
- Update of the WHO Framework on Mode of Action
- WHO publication on identifying important life stages for monitoring and assessing risks from exposure to environmental contaminants
- WHO guidance on characterizing uncertainties and variability in hazard assessment
- A review of research needs identified in WHO Environmental Health Criteria and Concise International Chemical Risk Assessment Documents
Network Goals

The World Health Organization (WHO) Chemical Risk Assessment Network is a voluntary collaborative initiative whose overall goal is to improve chemical risk assessment globally through facilitating sustainable interaction between institutions on chemical risk assessment issues and activities.

The Network has been established to enhance global efforts to assess risks to human health from exposure to chemicals.

The activities of the Network promote the objectives of the Strategic Approach to International Chemicals Management (SAICM).

Network Objectives

In the field of chemical risk assessment:

- Provide a forum for scientific and technical exchange
- Facilitate and contribute to capacity building
- Promote best practices and the harmonization of methodologies
- Assist in the identification of research needs and promote the application of new science in risk assessment practice
- Assist in the identification of emerging risks to human health from chemicals
- Share information about work programmes to avoid duplication of effort
- Upon request, assist WHO in the development of training and other materials in support of the above

Nature of Network

- Global, encompassing all WHO regions and economic strata
- Focus on risks to human health associated with exposure to chemicals through all pathways and routes of exposure, including in environmental media (air, water, soil) and food, through use of consumer products, in occupational settings, etc
- Project oriented; projects can be international, regional, multilateral or bilateral in scope
- Network products can be reports, guidance documentation, training sessions or materials, tools, databases, etc
Network Structure

- Network Participants are institutions undertaking work towards the Network objectives
- A Network Coordinating Group provides a mechanism for discussion of issues common to different projects and for reviewing and monitoring progress of activities
- A Network meeting will be held approximately once every two years to present and review the work of the Network, to share information and experiences from Participants, to evaluate progress on projects and to plan future actions

What it means to be a Network Participant

Network Participants engage in, and contribute to, Network activities. They identify a focal point for Network communications, share Network information within their organizations and help identify new Network Participants.

The terms of reference for the Network are available on the Network web site: www.who.int/ipcs.

Invitation to Become a Network Participant

The Network invites contributions from the following entities interested in undertaking work towards the Network objectives:

- Government and public health Institutions
- Intergovernmental organizations
- Professional societies
- WHO Collaborating Centres
- Nongovernmental organizations in official relations with WHO
- Other non-profit entities with relevant expertise

Interested organizations are invited to contact the WHO International Programme on Chemical Safety (IPCS) to obtain the application materials and further information.
