WHAT IS THE BIG PICTURE?

FACT: 24% of all global deaths are linked to the environment. (2016)
That’s roughly 13.7 million deaths a year.

WHERE IS IT HAPPENING?

- 4.1 million in South-East Asia Region
- 3.6 million in Western Pacific Region
- 2.5 million in Africa Region
- 1.4 million in European Region
- 1.1 million in the Region of the Americas
- 984,000 in Eastern Mediterranean Region
TOP 10 CAUSES OF DEATH FROM THE ENVIRONMENT

8.5 million out of 13.7 million deaths caused by the environment are due to noncommunicable diseases.
HOW THE ENVIRONMENT IMPACTS OUR HEALTH

People are exposed to risk factors in their homes, work places and communities through:

- **Air Pollution** including indoors and outdoors
- **Inadequate Water, Sanitation** and hygiene
- **Chemicals** and biological agents
- **Radiation** ultraviolet and ionizing
- **Community Noise**
- **Occupational Risks**
- **Climate Change**
- **Built Environments** including housing and roads
- **Agricultural Practices** including pesticide-use, waste-water reuse
Environmental impacts on health are uneven across age and mostly affect the poor. Children under five and adults between 50 and 75 years old are most affected by the environment.

Low- and middle-income countries bear the greatest share of environmental disease.

**YEARLY**

- **5.2 MILLION**
  Deaths in adults between 50 and 75 years. The most common causes are noncommunicable diseases and injuries.

- **1.6 MILLION**
  Deaths in children under five. The most prominent causes are lower respiratory infections and diarrhoeal diseases.

**Men** are slightly more affected due to occupational risks and injuries.

**Women** bear higher exposures to traditional environmental risks such as smoke from cooking with solid fuels or carrying water.

*World Health Organization* #EnvironmentalHealth
1. Apply low carbon strategies in energy generation, housing and the industry.
2. Use more active and public transportation.
3. Introduce clean fuels for cooking, heating and lighting and clean technologies.
4. Reduce occupational exposures and improve working conditions.
5. Increase access to safe water and adequate sanitation and promote hand washing.
6. Change consumption patterns to lower the use of harmful chemicals, minimize waste production and save energy.
7. Implement interventions that can increase sun protective behaviour.
8. Pass smoking bans to reduce exposure to second-hand tobacco smoke.
9. Always use a health in all policies approach to create healthier environments and prevent disease.

These WIN-WIN strategies are fundamental to achieving the Sustainable Development Goals. 17 goals to transform our world.

Let’s all work towards a healthier environment for our health.
