MONGOLIA

Recorded adult per capita consumption (age 15+)

Sources: FAO (Food and Agriculture Organization of the United Nations), World Drink Trends 2003

Last year abstainers

Research by Dr Erdenebayer of the Narcology Centre (survey on alcoholism in 1998) indicates that over 51% of the population drink more than they should, 8% of these being women.

Youth drinking (lifetime use of alcohol)

Data from a sample of 870 Hohhut, Inner Mongolia students.
The same study also found that 19% of students had drunk alcohol in the last 30 days. A larger proportion of indigenous Chinese (Han) have ever consumed alcohol (81%) compared to Mongolian students (61%). Han students were more likely to report ever having been drunk.3

Traditional alcoholic beverages
Traditionally, Mongolians drink koumiss, also known as airag - a fizzy and lightly alcoholic brew made by fermenting mare’s milk. It is still the summertime drink of choice for the country’s half a million herders.4

Unrecorded alcohol consumption
The unrecorded alcohol consumption in Mongolia is estimated to be 2.0 litres pure alcohol per capita for population older than 15 for the years after 1995 (estimated by a group of key alcohol experts).1

Morbidity, health and social problems from alcohol use
One recent report for the UNDP indicates that 72% of serious crime (murder, violent robbery, and attacks) are alcohol-related.2 It has also been noted that alcohol abuse could be Mongolia's biggest stumbling block to economic and social progress, with women especially falling victim to a daily round of vodka-fueled violence.5

Around 5% of all traffic accidents were due to drink driving and there were over 2500 cases of drunk driving in Ulaan Bataar alone (statistics from the traffic police).2
