TB Preventive Therapy – Challenges and Solutions

- **Procurement**
  - Lower dose formulations (e.g. 100mg, 50mg INH)
  - Coordination (e.g. single or multiple purchase systems/funds?)

- **Distribution** (e.g. within HIV care system and within TB care system)
  - Children with HIV and child TB contacts

- **Monitoring and evaluation** (knowing performance relative to need)
  - Children with HIV (all children living with HIV)
  - Child TB contacts (all child TB contacts <5 not treated for TB)

- **Screening**
  - Clinician comfort/acceptability with clinical decision-making
  - Community-based versus facility-based

- **Lack of understanding of rationale/acceptability** (families, clinicians)
  - Demand generation

- **Adherence**
