Mission:

To reduce morbidity associated with the prevalence of TB and HIV among at-risk drug users and their contacts.
Core objectives

- Provide information on reducing or totally avoiding risky behaviour.
- Empower individuals to change their behaviour.
- Provide psychological and information support to minimize risk of unsuccessful outcome.
Core objectives

- Practical skills training.
- Promote safe injection practices and safe sex.
Action

- Peer counselling.

- Access to needle and syringe exchange programmes.

- Work with key partners to ensure universal access to preventive measures.
Injection behaviour

- Proportion of IDUs using shared needle for most recent injection
- Proportion of IDUs using shared syringe for most recent injection
Sexual behaviour of IDUs

- Sexual partners of IDUs
- Condom use
- Use of shared needle – 37%
- Use of shared syringe – 9%
- Regular sexual partners:
  Men – 81% ; women – 83%
- Random partners:
  Men – 46%; women – 27%
- Commercial sex workers:
  Men – 11%; women – 16%
Use of condom during most recent sexual encounter among male and female IDUs [Translator's note: see notes at bottom of slide for table legend]

- Постоянные партнеры: 26%
- Непостоянные партнеры: 64%
- Коммерческие партнеры: 80%
Voluntary testing coverage among IDUs:

- Testing – 57%
- Voluntary – 52%
TB prevention measures

- IDUs covered by TB prevention campaign – 84%
- TB awareness level - 68% \ 31%
- Diagnostic reflexes (X-ray) – 43%
