Integration of collaborative TB/HIV activities with harm reduction services

Maryna Zelenskaya Ph D

State service on HIV/AIDS and other socially diseases control,
Head of Department on HIV/AIDS combating
• Epidemiological and diseases – specific background

• Ukraine has the most severe HIV epidemic in the Eastern Europe & Central Asia, with more than 211 230 cases HIV - infection diagnosed since the beginning of HIV surveillance in 1987.

• 50 629 cases of AIDS had been diagnosed among citizens of Ukraine, including 26360 AIDS-related death.

• Despite of the high prevalence HIV infection, the epidemic in Ukraine is still classified as concentrated. The prevalence of HIV has consistently exceeded 5% among various subpopulations of injection drug-users (IDUs), female sex workers (FSWs), and men who have sex with men (MSM), but remains less than 1% in pregnant women in urban areas.
Data of the official statistic on HIV/AIDS, Tb in Ukraine

Based on the official statistical data of the Ministry of health of Ukraine (June 2012):

- **122 000** HIV – infected people living under medical observation (prevalence of HIV among general population 264,3 on 100 000);

In 2011 in Ukraine were diagnosed:

- **21 177** new cases of HIV (prevalence 46,2 on 100 000), 9189 – AIDS, among them **5745 AIDS/TB (62,5%)**

- **30695** new cases of Tb (prevalence 67,2 on 100 000) **11 217** patients have HIV/TB;
Basic modes of HIV-infection

2003 year
- Sexual transmission: 48%
- Injection drugs: 18%
- Vertical transmission from mother to child: 3%
- Unknown: 31%

2008 year
- Sexual transmission: 48%
- Injection drugs: 19%
- Vertical transmission from mother to child: 2%
- Unknown: 31%
HIV among most at-risk populations

The HIV epidemic in Ukraine remains largely concentrated among most-at-risk populations (MARPs), including injecting drug users (IDUs), sex workers (SWs), men who have sex with men (MSM), and sexual partners of these populations. While there are gaps in the coverage and completeness of routine HIV sero-surveillance among these populations, official data indicate that the epidemic continues to decrease among IDUs and increase among their sexual partners. However, the proportion of IDUs among newly reported HIV cases is decreasing every year, from 83.6% in 1997 to 31% in 2011.
New cases of HIV in the group of IDU (1994-2011)
HIV, AIDS, TB and HIV/Tb morbidity (per 100 thousands) in 2000 – 2010 years in the Ukraine
Prevalence of TB among HIV-infected in the Ukraine
Implementation of WHO recommendations in the area of collaborative activities in the Ukraine

A Establish and strengthen the mechanism for delivering integrated TB and HIV services
A.1. set up and strengthen a coordinating body for collaborative TB/HIV activities functional at all levels
The State Service on HIV/AIDS and other socially diseases control (governmental body – central body of executive authority) was organized in 2011 in the Ukraine: CCM on the national and 27 Regional coordination council on HIV/AIDS, TB and drug-addiction control on the regional level
A.2. Determine HIV prevalence among TB patients and TB prevalence among people living with HIV
A. 3. Carry out joint TB/HIV planning to integrate the delivery of TB and HIV service
A. 4. Monitor and evaluate collaborative TB/HIV activities
Organizational structure of HIV/AIDS counteraction

Ministry of Health of Ukraine
State service on HIV/AIDS and other dangerous diseases control

Regional management of health system (27)
- Regional Centers of HIV/AIDS counteraction
- Infectional hospitals
- Narcological hospitals
- Tb hospitals
- Blood transfusion stations
- STI hospitals
- Antenatal clinics

Regional sanitarian-epidemiological stations (SES)

Ukrainian center of HIV/AIDS prevention and control

Cities’ SES

Districts’ SES
B. Reduce the burden of Tb in people living with HIV and initiate early ART (the Three I’s for HIV/TB)

ART covers 33 858 HIV – infected patients (as of 01.07.2012)

State’s budget – 23 941 (72,9%);
Global fund 8 919 (27,1%) patients with HIV/Tb, HIV/Tb/IDU).
998 imprisoned HIV patients (Global fund).
ART coverage distribution by patient’s status (active IDU, active TB, active VH) (as of 01/01/2011).

- 70% HIV infected patients with the active viral hepatitis (VH) are covered ART.
- 63% HIV infected patients with the active TB are covered ART.
- 67% HIV infected IDU are covered ART.
C. reduce the burden of HIV in patients with presumptive and diagnosed Tb

- OST in Ukraine (as of 01.03.2012)
- 136 hospitals in Ukraine provided OST services

- OST cover 6678 IDU (11,7% IDU who are under medical observation)

- 2981 (44,6%) HIV-infected IDU;
- 931 (31,2%) receive ART, 289 (9,7%)-prepare to ART

- 3837 (57%) IDU have viral hepatitis B, C
- 1186 (17,8%) IDU have TB
Coverage by OST among IDUs being under medical observation (11.7%)
% of HIV+ IDU among all IDUs on OST in Ukraine (2012)
Prevention and treatment of OI and TB among HIV patients in Ukraine in 2011 year:

Received course of prevention treatment 5,029 HIV-infected patients;

TB treatment DOTS 2,248 HIV-infected patients;

In 2010 1,612 HIV-infected patients who received ART started receiving DOTS; 3,544 continue DOTS therapy.
