Progress Recommendation Key results/achievements

**ACHIEVED OR ON TRACK**

- **Civil registration, vital statistics (CRVS) assessment completed, plan developed**
  - CRVS Assessment and Action Plan have been completed with full participation of the Ministry of Information (MOI), the Ministry of Health (MOH) and the Ministry of Planning (MOP). The Assessment report is with the three ministries for dissemination.
  - Partners have been invited to support the implementation of the Action Plan. WHO and partners have been also supporting the introduction of ICD-10 in Cambodia. In 2013, IHP+ funding was used to support a national workshop, which reviewed the applicability of ICD-10 in the Cambodian context, and allowed for the pre-selection of around 300 diseases.

- **Maternal death surveillance and response (MDSR) system in place**
  - Development of Maternal Death Audit (MDA) training materials was completed; three Trainings Of Trainers were organized by the National Reproductive Health Program for all 24 key members of provincial MDA committees; training of the Provincial MDA Committee was conducted in 14 out of 24 provinces (as per original plan).

- **IHP+ compact or equivalent partnership agreement**
  - Cambodia joined IHP+ in 2007. It has a National Health Strategic Plan for 2008-2015, and preparations for a new one began in summer 2014. A mid-term review of the current plan took place in 2011. An IHP+ Country Grant has primarily been used to support the planning and evaluation processes of the Health Strategic Plan, to strengthen civil society organization engagement, and to support the Technical Working Group for Health, co-chaired by the MOH and WHO on behalf of all development partners.

**CONTINUED EFFORTS REQUIRED**

- **Available core 11 indicators monitored**
  - The Annual National Statistics Report 2013 is being finalized. It includes core indicators, disaggregated by provinces and ODs.
  - The data quality scorecard 2012 was finalized in October 2013; the 2013 scorecard is due for completion in July 2014.

- **Country reporting on health expenditure by financing source**
  - Cambodia's first ever NHA (based on 2012 dataset) is in progress. The Department of Planning and Health Information (DPHI) of the MOH established a small technical team to carry out data collection, validation and analysis. Results of the NHA exercise are expected in 2014.

**WORK NOT PRIORITIZED / NOT BEGUN**

- **National eHealth strategy**
  - This has not been planned. However, in 2013 resources were made available to make an initial assessment of country preparedness for developing such a strategy. While there is interest to advance this work, other priorities and limited capacity within the MOH are the main barriers to the way forward.

- **National health sector review**
  - Not planned

- **Political leaders engaged in RMNCH**
  - Not planned
Future needs

1. Training of Provincial MDA Committees to be conducted in the remaining 10 provinces.
2. Data quality and strengthening HMIS at central and sub-national levels, including production of provincial health statistics report.
3. Strengthening CRVS will require continuous support, facilitating the efforts of three ministries: MOI, MOH, and MOP.
4. Development of a comprehensive eHealth strategy to coincide with the development of Health Strategic Plan, 2016-2020.
5. Production of NHA on annual basis.
