**Progress**

**Recommendation**

**Key results/achievements**

**ACHIEVED OR ON TRACK**

- Maternal death surveillance and response (MDSR) system in place
  - The MDSR policy has been implemented in facilities in three out of the six regions of the country.
  - Togo has been scaling up facility-based MDSR, and from there will move to community-based MDSR.
  - As a follow up action to the MDSR recommendation, a national consensus meeting was held to reflect on how to implement the scheme for subsidizing caesarean sections for vulnerable populations. A further cost-effective analysis is to be conducted in 2014, with the support of the grant from the French Development Agency under their Muskoka commitment.

- National eHealth strategy
  - A National eHealth Strategy is under development.
  - A website for hosting the ‘Country health policy process’ is now operational under Ministry of Health (MOH) leadership.
  - A mobile phone technology application has been used for DHS data collection.

- IHP+ compact or equivalent partnership agreement
  - IHP+ compact was signed in 2012.
  - Updating of norms and standards for the national health system is in process.

- National health sector review
  - The national health sector strategic plan (NSSP) (2012-2015) was approved.
  - A national health sector review was conducted, including thematic reviews on access to essential medicines, health financing, universal health coverage and governance.
  - District health operational plans were developed for all 40 districts for 2014, based on a bottom-up review process, with inputs from district teams.

- Political leaders engaged in RMNCH
  - The Togo government has committed to implementing strategies for ending preventable maternal and child deaths (African Union meeting held in Angola/Luanda, May 2014).

**CONTINUED EFFORTS REQUIRED**

- Civil registration, vital statistics (CRVS) assessment completed, plan developed
  - A rapid assessment of the national CRVS system was conducted with the support of UNICEF; results will be used to improve the system.

- Available core 11 indicators monitored
  - The national HMIS was evaluated, and a strategic plan to strengthen it was approved and implemented.
  - A health facility Service Availability and Readiness Assessment (SARA) survey was completed.
  - Analysis of the Demographic and Health Survey 2014 (DHS 2014) is underway.
  - M&E for the NSSP was approved, including 33 tracer indicators for performance monitoring at all levels of the health system.

- Country reporting on health expenditure by financing source
  - The MOH National Health Accounts (NHA) Task Force was trained on use of the System of Health Accounts (SHA 2011) methodology.
  - Data collection at all levels is underway to update the 2012 NHA report.
**Future needs**

1. Accelerate the scaling up of MDSR-related activities to involve the remaining regions.
2. Finalize CRVS assessment and plan development.
3. Finalize the national eHealth strategy development.
4. Support the institutionalisation of an RMNCH programme review.
5. Support HMIS data quality improvement.
